NO_PRINT

Structure and Purpose

The proposed template for Performance Plans was developed to facilitate the work of Member States and NSAs in their tasks to draw up and adopt performance plans and targets for RP4. It follows the structure provided for in Annex II of Commission Implementing Regulation (EU) No 2019/317 of 11 February 2019 laying down a performance and charging scheme in the Single European Sky and repealing Implementing Regulations (EU) No 390/2013 and (EU) No 391/2013.

Furthermore, to reduce the administrative burden on Member States the template is already prefilled to the maximum extent possible.

In light of this, different field categories have been identified and colour-coded to facilitate the reporting:

Colour coding	
Item 1	*Information to be provided by Member States*
Item 2	*Pre-filled but editable information*
Item 3	*Pre-filled or automatically computed information*
Item 4	*Dynamic selection*

States can easily provide additional narrative material in the annexes which form an integral part of the performance plan.

The worksheets in the Excel file replicate the said structure and the tabs for main sections have been highlighted in black, while subsections are in light brown as shown below:

Tips and tricks

· Since the Excel file is completely unprotected, be careful when filling the cells or adding lines/columns to avoid erasing the prefilled or pre-calculated areas.

· Manually adapt height of cell if necessary, in particular for text or description boxes.

· Within a cell, press ALT+ENTER to jump to the next line.

Additional comments	This performance plan has been reviewed by all signatories. It has been signed in the margins of our FAB coordination meeting held on 29 Feb. 2014.

· For existing text from another source, copy and paste into the formula bar will ensure that all text remains within a single cell.

· In order to **print** your performance plan, please refer to section “Signatories”.

Performance Plan

Italy

Fourth Reference Period (2025-2029)

Status:	Draft performance plan (Art. 12 of IR 2019/317)
Date of issue:	24 December 2024

Table of Contents

SECTION 1: INTRODUCTION

1.1 The situation

1.1.1 - List of ANSPs and geographical coverage of services
1.1.2 - Other entities in the scope of the Performance and Charging Regulation as per Article 1(2) last para.
1.1.3 - Charging zones (see also 1.4-List of Airports)
1.1.4 - Other general information relevant to the plan

1.2 - Traffic Forecasts

1.2.1 - En route
1.2.2 - Terminal

1.3 - Stakeholder consultation

1.3.1 - Overall outcome of the consultation of stakeholders on the performance plan
1.3.2 - Specific consultation requirements of ANSPs and airspace users on the performance plan
1.3.3 - Consultation of stakeholder groups on the performance plan

1.4 - List of airports subject to the performance and charging Regulation

1.4.1 - Airports as per Article 1(3) (IFR movements ≥ 80 000)
1.4.2 Other airports added on a voluntary basis as per Article 1(4)

1.5 - Services under market conditions

1.6 - Process followed to develop and adopt a FAB Performance Plan

1.7 - Establishment and application of a simplified charging scheme

1.7.1 - Scope of the simplified charging scheme
1.7.2 - Conditions for the application of the simplified charging scheme

Annexes of relevance to this section

ANNEX C. CONSULTATION
ANNEX D. LOCAL TRAFFIC FORECASTS
ANNEX L. JUSTIFICATION FOR SIMPLIFIED CHARGING SCHEME
ANNEX Y. RESPONSES TO COMPLETENESS VERIFICATION

1 - INTRODUCTION

1.1 - The situation

NSA(s) responsible for drawing up the Performance Plan	Italian Civil Aviation Authority (ENAC)

1.1.1 - List of ANSPs and geographical coverage and services

Number of ANSPs	2

ANSP name	Services	Type of entity	Geographical scope
ENAV	Please refer to 3.4.3 CNSP#1 table a)	ATSP/CNSP	Italian Airpsace En-Route e Terminal Services
ITAF	Please refer to 3.4.3 CNSP#2 table a)	ATSP/CNSP	Italian Airpsace En-Route e Terminal Services

Cross-border arrangements for the provision of ANS services*

** To be reported in the performance plan: any cross-border area or group of adjacent cross-border areas of a size above 500 km^2, unless the area or group of areas concerned has fewer than 7,500 controlled flight movements on average per year*

Number of cross-border area(s) where the ANSP(s) of the Member State provide(s) services in another State's charging zone(s)	10

Number of cross-border area(s) where ANSP(s) from another State provide(s) services in the charging zone(s) covered by the performance plan	10

1.1.2 - Other entities in the scope of the Performance and Charging Regulation as per Article 1(2) last para.

Number of other entities	3

Entity name	Domain of activity	Rationale for inclusion in the Performance Plan
Eurocontrol	Network Manager	Application of art. 22(1) EU reg. n. 2019/317
ACFJ and PECASUS Consortium	Space Weather Centers	EC indication NCP 25th October 2024 and Joint Declaration by the States in the Single Sky Committee
ENAC - Italian Civil Aviation Authority	National Supervision Authority	Application of art. 22(1) EU reg. n. 2019/317

1.1.3 - Charging zones (see also 1.4-List of Airports)

En-route	Number of en-route charging zones	1

En-route charging zone 1	Italy

Terminal	Number of terminal charging zones	2

Terminal charging zone 1	Italy - Zone 1 NEW
Terminal charging zone 2	Italy - Zone 2 NEW

1.1.4 - Other general information relevant to the plan

Relevant local circumstances with high significance for performance target setting
In the first week of July 2024 Italy has launched a public consultation and a discussion at national level on the revision of the Terminal Charging Zones, with the scope of being both fully aligned with Reg. 317/ 2019 and of further speeding - up the competitiveness and the attractiveness of the Italian Airport network in order to support the expected future traffic increases. The final solution identified, consisted in the establishment of two charging zones - which differ from RP3 ones for their composition - both falling under the umbrella of the Performance Scheme. In particular: • New TCZ 1: it comprises the airports that in RP3 are included in TCZ 1 and TCZ 2 (i.e., Roma Fiumicino, Milano Malpensa, Milano Linate, Bergamo Orio al Serio and Venezia Tessera). • New TCZ 2: it includes 44 airports as follows: o 41 ENAV airports; o 3 ITAF airports (Pisa, Grosseto and Trapani). Please note that ITAF airports are not subject to traffic risk sharing and incentive scheme for capacity. The new Terminal Charging Zones will apply starting from 2025 and such terminal organisation will ensure further transparency and consistency for the entire RP4 while facilitating analysis and assessments for NSA and European Commission. In RP4, the new TCZ2 foresees the inclusion, under the umbrella of ENAV service provision, of Aosta airport which up to 2024 is privately managed. According to that change, the airports served by ENAV move from 40 as in RP3, to 41 in RP4. Moreover, Salerno airport will have the upgrade of the service from AFIS to Tower in RP4. Other airports, such as Crotone, Parma, Forlì, Rimini, Cuneo, Comiso, will have an extension in the opening hours in RP4. Such changes have been taken into consideration when assessing ENAV cost levels in 2024.

Additional information

1.2 - Traffic Forecasts

1.2.1 - En route

En route Charging zone 1 | **Italy**

En route traffic forecast | Local forecast

Local Forecast	2022A	2023A	2024	2025	2026	2027	2028	2029	CAGR 2024-2029
IFR movements (thousands)	1.788	1.983	2.181	2.301	2.389	2.456	2.514	2.567	3,3%
IFR movements (yearly variation in %)		10,9%	10,0%	5,5%	3,8%	2,8%	2,4%	2,1%	
En route service units (thousands)	9.562	10.618	11.761	12.456	12.942	13.330	13.690	14.032	3,6%
En route service units (yearly variation in %)		11,0%	10,8%	5,9%	3,9%	3,0%	2,7%	2,5%	

Specific local factors justifying not using the STATFOR base forecasts
(provide justification below or refer to Annex D for more detailed explanation)

The forecast of Service Units for the period 2025-2029 (RP4) was carried out on the basis of the actual traffic trend developed during 2023 and 2024, using forecast tools. In general terms, 2024 forecast for service units has been defined considering actual traffic up to October 2024 while, for 2025-2029, it was not possible to follow the STATFOR forecasts as the data expcted in 2024 for Service Units is lower than the +11,1% forecasted by STATFOR Base Scenario (Oct-24) for the year 2024.
Therefore, for the period 2025-2029 it has been adopted a local forecast, taking into account the historical trend of the traffic recorded in the two previous years, the actual data observed in the first 10 month of the year 2024, the information provided in the current network operation plan, as well as the probable future market evolution in the Italian air traffic sector (for example, the development of some airlines very significant for the national market, i.e. ITA).

NOTE: Section 1.3 (Stakeholder Consultation) should include details on the consultation with airspace users' representatives and ANSPs concerned on the rationale for not using the STATFOR base forecasts.

1.2.2 - Terminal

Terminal Charging zone 1 | **Italy - Zone 1 NEW**

Terminal traffic forecast | Local forecast

Local forecast	2022A	2023A	2024	2025	2026	2027	2028	2029	CAGR 2024-2029
IFR movements (thousands)	-	-	832	862	894	919	946	967	3,1%
IFR movements (yearly variation in %)		-	-	3,6%	3,7%	2,8%	2,9%	2,2%	
Terminal service units (thousands)	468	546	614	648	677	700	724	742	3,9%
Terminal service units (yearly variation in %)		16,7%	12,3%	5,6%	4,4%	3,4%	3,5%	2,5%	

Specific local factors justifying not using the STATFOR base forecasts
(provide justification below or refer to Annex D for more detailed explanation)

In the first week of July 2024 Italy has launched a public consultation and a discussion at national level on the revision of the Terminal Charging Zones, with the scope of being both fully aligned with Reg. 317/ 2019 and of further speeding - up the competitiveness and the attractiveness of the Italian Airport network in order to support the expected future traffic increases. The final solution identified, consisted in the establishment of two charging zones - which differ from RP3 ones for their composition - both falling under the umbrella of the Performance Scheme. In particular:

•New TCZ 1: it comprises the airports that in RP3 are included in TCZ 1 and TCZ 2 (i.e., Roma Fiumicino, Milano Malpensa, Milano Linate, Bergamo Orio al Serio and Venezia Tessera).

•New TCZ 2: it includes 44 airports as follows:

o 41 ENAV airports;

o3 ITAF airports (Pisa, Grosseto and Trapani). These 3 airports are not subject to traffic risk sharing and incentive scheme for capacity.

The new Terminal Charging Zones will apply starting from 2025 and such terminal organisation will ensure further transparency and consistency for the entire RP4 while facilitating analysis and assessments for NSA and European Commission. In RP4, the new TCZ2 foresees the inclusion, under the umbrella of ENAV service provision, of Aosta airport which up to 2024 is privately managed. According to that change, the airports served by ENAV move from 40 as in RP3, to 41 in RP4. Moreover, Salerno airport will have the upgrade of the service from AFIS to Tower in RP4. Other airports, such as Crotone, Parma, Forlì, Rimini, Cuneo, Comiso, will have an extension in the opening hours in RP4. Such changes have been taken into consideration when assessing ENAV cost levels in 2024 for comparison reasons.

For what concerns the definition of the RP4 Service Units forecasts for the new two charging zones, the baseline value (2024 forecast) for TCZ1 has been defined considering actual traffic up to October 2024 and the expected projections of traffic for the remaining two months while for TCZ2 it has been estimated taking into account the actual traffic recorded in the first nine months of the year and the expected projections of traffic for the remaining three months. The trend of the terminal SUs for RP4 in its entirety has taken into account recently published STATFOR October 2024 forecast, and it has been estimated as follows:

•New TCZ1: the average growth between the base and high scenario of STATFOR October 2024 forecast has been applied from 2026 onwards.

•New TCZ2: following the changes in its composition and in the upgrade of services/hourly opening hours in some airports, it is expected that in 2025 TCZ2 new will have a major increase in traffic, while in 2026 it has been adopted a forecast considering an expected stabilisation of traffic levels. The average growth between the base and high scenario of STATFOR October 2024 forecast has been applied from 2027 onwards.

NOTE: Section 1.3 (Stakeholder Consultation) should include details on the consultation with airspace users' representatives and ANSPs concerned on the rationale for not using the STATFOR base forecasts.

Terminal Charging zone 2 **Italy - Zone 2 NEW**

Terminal traffic forecast Local forecast

Local forecast	2022A	2023A	2024	2025	2026	2027	2028	2029	CAGR 2024-2029
IFR movements (thousands)	-	-	835	863	894	919	945	964	2,9%
IFR movements (yearly variation in %)		-	-	3,4%	3,6%	2,8%	2,8%	2,0%	
Terminal service units (thousands)	-	-	485	526	537	553	570	583	3,8%
Terminal service units (yearly variation in %)		-	-	8,4%	2,2%	3,0%	3,1%	2,3%	

Specific local factors justifying not using the STATFOR base forecasts
(provide justification below or refer to Annex D for more detailed explanation)

In the first week of July 2024 Italy has launched a public consultation and a discussion at national level on the revision of the Terminal Charging Zones, with the scope of being both fully aligned with Reg. 317/ 2019 and of further speeding - up the competitiveness and the attractiveness of the Italian Airport network in order to support the expected future traffic increases. The final solution identified, consisted in the establishment of two charging zones - which differ from RP3 ones for their composition - both falling under the umbrella of the Performance Scheme. In particular:

•New TCZ 1: it comprises the airports that in RP3 are included in TCZ 1 and TCZ 2 (i.e., Roma Fiumicino, Milano Malpensa, Milano Linate, Bergamo Orio al Serio and Venezia Tessera).

•New TCZ 2: it includes 44 airports as follows:

o 41 ENAV airports;

o3 ITAF airports (Pisa, Grosseto and Trapani). These 3 airports are not subject to traffic risk sharing and incentive scheme for capacity.

The new Terminal Charging Zones will apply starting from 2025 and such terminal organisation will ensure further transparency and consistency for the entire RP4 while facilitating analysis and assessments for NSA and European Commission. In RP4, the new TCZ2 foresees the inclusion, under the umbrella of ENAV service provision, of Aosta airport which up to 2024 is privately managed. According to that change, the airports served by ENAV move from 40 as in RP3, to 41 in RP4. Moreover, Salerno airport will have the upgrade of the service from AFIS to Tower in RP4. Other airports, such as Crotone, Parma, Forlì, Rimini, Cuneo, Comiso, will have an extension in the opening hours in RP4. Such changes have been taken into consideration when assessing ENAV cost levels in 2024 for comparison reasons.

For what concerns the definition of the RP4 Service Units forecasts for the new two charging zones, the baseline value (2024 forecast) for TCZ1 has been defined considering actual traffic up to October 2024 and the expected projections of traffic for the remaining two months while for TCZ2 it has been estimated taking into account the actual traffic recorded in the first nine months of the year and the expected projections of traffic for the remaining three months. The trend of the terminal SUs for RP4 in its entirety has taken into account recently published STATFOR October 2024 forecast, and it has been estimated as follows:

•New TCZ1: the average growth between the base and high scenario of STATFOR October 2024 forecast has been applied from 2026 onwards.

•New TCZ2: following the changes in its composition and in the upgrade of services/hourly opening hours in some airports, it is expected that in 2025 TCZ2 new will have a major increase in traffic, while in 2026 it has been adopted a forecast considering an expected stabilisation of traffic levels. The average growth between the base and high scenario of STATFOR October 2024 forecast has been applied from 2027 onwards.

NOTE: Section 1.3 (Stakeholder Consultation) should include details on the consultation with airspace users' representatives and ANSPs concerned on the rationale for not using the STATFOR base forecasts.

1.3 - Stakeholder consultation

1.3.1 - Overall outcome of the consultation of stakeholders on the performance plan

Description of main points raised by stakeholders and explanation of how they were taken into account in developing the performance plan
Cost of capital;traffic forecast; reconciliation of new and existing investments. For additional information, please refer Annex C

1.3.2 - Specific consultation requirements of ANSPs and airspace users on the performance plan

Topic of consultation	Applicable	Results of consultation
Establishment of determined costs included in the cost base for charges	Yes	Positive
New and existing investments, and in particular new major investments, including their expected benefits	Yes	More detailed information requested to reconcile the existing and the new investments
Charging policy	Yes	Another consultation will be scheduled on terminal charges
Maximum financial advantages and disadvantages for the mandatory incentive scheme on capacity	Yes	The Lufthansa representative has shown his disappointment to the NSA that he did not choose a system of distribution of the asymmetric incentive, in favor of the penalty. He justified the request on the grounds that excessive delays create a domino effect on baggage delivery and connections. It was pointed out that the domino effect exists for all those affected and that it is considered more impartial to adopt a symmetrical system, in a complex environment such as aviation.
Symmetric range ("dead band") for the purpose of the mandatory incentive scheme on capacity	Yes	No comment recieved
Where applicable, decision to modulate performance targets for the purpose of pivot values to be used for the mandatory incentive scheme on capacity	Yes	It is considered that the "modulated" system, based on values more attributable to ANSP, is more suitable to encourage the supplier to improve its performance and entice him to invest in innovation and human resources. Putting non-directly manageable contingencies on his shoulders transforms the incentive into something more like a "lottery".
Establishment or modification of charging zones	Yes	Evaluation on new terminal charging zone under evaluation
Where applicable, values of the modulated parameters for the traffic risk sharing mechanism	No	
Where applicable, decision to apply the simplified charging scheme	No	
Where applicable, decision to diverge from the STATFOR base forecast	Yes	See comments on sheet 1.2 Traffic Forecast

1.3.3 - Consultation of stakeholder groups on the performance plan

#1 - ANSPs	
Stakeholder group composition	ENAV, ITAF
Dates of main meetings / correspondence	24th September 2024
Main issues discussed	See Annex C
Actions agreed upon	See Annex C
Points of disagreement and reasons	See Annex C
Final outcome of the consultation	See Annex C. Consultation process not concluded

Additional comments

#2 - Airspace Users	
Stakeholder group composition	IATA, Air France, Ryanair, Lufthansa, EasyJet, Swiss, Ethiad, IAG
Dates of main meetings / correspondence	24th september 2024
Main issues discussed	See Annex C
Actions agreed upon	See Annex C
Points of disagreement and reasons	See Annex C

Final outcome of the consultation	See Annex C. Consultation process not concluded

Additional comments

#3 - Professional staff representative bodies	
Stakeholder group composition	not present
Dates of main meetings / correspondence	24th september 2024
Main issues discussed	
Actions agreed upon	
Points of disagreement and reasons	
Final outcome of the consultation	

Additional comments

#4 - Airport operators	
Stakeholder group composition	not present
Dates of main meetings / correspondence	24th september 2024
Main issues discussed	
Actions agreed upon	
Points of disagreement and reasons	
Final outcome of the consultation	

Additional comments
Not present

#5 - Airport coordinator	
Stakeholder group composition	not present
Dates of main meetings / correspondence	24th september 2024
Main issues discussed	
Actions agreed upon	
Points of disagreement and reasons	
Final outcome of the consultation	

Additional comments
Not present

#6 - Other (specify)	
Stakeholder group composition	PRB
Dates of main meetings / correspondence	24th september 2024
Main issues discussed	n.a.
Actions agreed upon	n.a.
Points of disagreement and reasons	n.a.
Final outcome of the consultation	n.a.

2.1.4 - Detail of new major investments for RP4 from table A

NOTE: Section 1.3 (Stakeholder Consultation) should include details on the consultation with airspace users' representatives on new major investments.

Name of new major investment 1	***SECURITY, MANUTENZIONE STRAORDINARIA E MESSA A NORMA***		Reference #	***A1***	Total value of the asset		***31.146.414***	
Main category of the investment		New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancilliary	Other
						X		
Description of the asset		This programme aims to Increase the level of security through the adoption of more performing physical security countermeasures, on sites where management, CNS and ATM infrastructures already exist and on new sites. The programme will also deliver system update of centralized security platforms. This programme will also deliver extraordinary maintenance activities for buildings and plants, as well as adaptation and compliance for safety and firefighting adjustments in several sites.						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No							
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan								
Level of impact of the investment	Network level	N.A.						
	Local level	N.A.						
Quantitative impact per KPA		Safety		Environment	Capacity		Cost Efficiency	
		Significant		Significant	N/A		N/A	
Results of the consultation of airspace users' representatives								
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives						

Name of new major investment 2	***AMPLIAMENTI, RISTRUTTURAZIONI E NUOVE SEDI***		Reference #	***A2***	Total value of the asset		***128.345.000***	
Main category of the investment		New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancilliary	Other
						X		
Description of the asset		This programme will deal with setup, expansion and renovation of Towers, their Technical Blocks, power stations and other components of the traditional TWRs, in particular the following measures will be undertaken throughout the italian territory: - detailed projects and works for anti seismic compliance implementation and consolidation in several ENAV sites and premises - Renovation and updating of the different technical blocks for Towers, comprising adaptation of the blocks required for Remote Towers. - Electrical power plants and stations: a number of power stations in airport and remote sites will have to be modernised. Detailed projects definition, civil works and infrastructure installation and delivery will be performed - setup of new infrastructures and buildings at operational sites This programme will also deliver expansion and renovation of the sites in Rome (HQ and Ciampino/Rome ACC to allocate consolidation from Brindisi ACC), the preparation and renovation of the building of the RTCC at Padua ACC, initial activities for the new TWR in Palermo and seismic rehabilitation and consolidation at FCO Airport TWR.						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No							
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		This programme is instrumental and consistent with the ATM Master Plan taking into account what foreseen within SDO#6 - DA#6.1 - Virtual Center and DA#6.2 - Flexible and dynamic allocation of different Multiple Remote Tower Modules (MRTMs) accommodated within a Remote Tower Control Centre (RTCC). Part of this programme will cover at Brindisi and Padua ACC, the required adaptations of infrastructures in order to accommodate communication and all other infrastructures required to remotize local airports within Padua and Brindisi RTCC.						
Level of impact of the investment	Network level	N.A.						
	Local level	Performance impact at local level is considered to be high for the effect that the foreseen modernization works will have on the local sites, especially in the framework of the Remote Towers implementation						
Quantitative impact per KPA		Safety		Environment	Capacity		Cost Efficiency	
		Negligeable		Significant	Negligeable		Negligeable	
Results of the consultation of airspace users' representatives								
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives						

Name of new major investment 3	***REALIZZAZIONE, ADEGUAMENTO, OTTIMIZZAZIONE DEI SISTEMI ENERGETICI***		Reference #	***A3***	Total value of the asset		***47.200.000***	
Main category of the investment		New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancilliary	Other
						X		
Description of the asset		This programme deals with energy production and optimisation of energy consumption at local (airports and CNS sites) and central sites (HQ/ACCs). In particular the programme will deliver implementation, adaptation, optimization measures of energy systems such as upgrading and energy optimization of buildings. In the framework of this programme, photovoltaic and mini-wind sistems will be implemented at several operational sites, several energy backup sistems will be modernised and air conditioning systems will be modernised or replaced at operational/airport sites.						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No							
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		The program contributes to ATM MP performance ambition in relation to climate impact and reaching the EU climate neutrality objective for 2050.						
Level of impact of the investment	Network level							
	Local level	This programme has effect on the overall environmental sustainability and as such, brings a substantial improvement to the overall sustainability of the italian infrastructure implementation, serving the EU network.						
Quantitative impact per KPA		Safety		Environment	Capacity		Cost Efficiency	
		Negligeable		Significant	N/A		Negligeable	
Results of the consultation of airspace users' representatives								
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives						

Name of new major investment 4	***INFRASTRUTTURE DIGITAL TWR***		Reference #	***A4***	Total value of the asset		***27.700.000***	
Main category of the investment		New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancilliary	Other
						X		
		This programme is devoted to the delivery of infrastructures and works dedicated to the implementation of the Digital Remote Towers at						

Description of the asset		local airports selected for remotisation. This activity will comprise demolition or adaptation of existing infrastructures, as well as the setup of dedicated pylons and all other infrastructure required by the change of service delivery model at the local airports identified.
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No	
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		This programme is instrumental and consistent with the ATM Master Plan taking into account what foreseen within SDO#6 - DA6.1 - Virtual Center and DA6.2 - Flexible and dynamic allocation of different Multiple Remote Tower Modules (MRTMs) accommodated within a Remote Tower Centre (RTC). This programme will cover all required preparations and adaptation of infrastructures (buildings/old towers, pylons, technical blocks) at local level for local Airports to be remotised.
Level of impact of the investment	Network level	N.A.
	Local level	Performance impact at local level is considered to be high for the effect that the foreseen modernization works will have on the local sites, especially in the framework of the Remote Towers implementation
Quantitative impact per KPA		Safety: Negligeable; Environment: Negligeable; Capacity: Significant; Cost Efficiency: Significant
Results of the consultation of airspace users' representatives		The implementation of Digital Remote TWRs will allow better optimisation of resources and economies of scale at local RTCC level. It is also expected to increase capacity enabling extention of service level in smaller airports where this was not originally foreseen.
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives

Name of new major investment 5	***NUOVO SISTEMA ATM DI ACC: FUNZIONALITÀ AVANZATE***	Reference #	***A5***	Total value of the asset			***58.000.000***
Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
	X						
Description of the asset	This programme is aimed at finalizing the delivery end entry into operations of the ENAV new ATM System, based on the developments completed in RP3 of the FDP Component CoFlight. This ultimate major step of the initiative, following the development and completion of the previous builds, will integrate, starting from 2025 in the operational system being deployed, requirements from the Operations domain as well as different subsystems and ATM tools required by CP1, such as requirements comprised within CP1 Family S.6.1 and CP1 AF6.						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	Yes	This investment is related to system requirements mandated by CP1 Regulation concerning the AF 5.6.1 and AF 6.1.2, respectively addressing FF-ICE and Initial A/G trajectory sharing requirements.					
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan	This programme is instrumental and consistent with the ATM Master Plan taking into account what foreseen within: - SDO#5 Transformation to trajectory-based operations (TBO) - DA#5.3 Implement dynamic route availability document (RAD) as the increased prediction and data exchange capabilities, at network level, will allow better integration of network and ATC constraints in strategic, planning and tactical phase. - SDO#5 and DA#5.1 - Implement enhanced conflict detection and resolution (CD&R) support tools by using aircraft derived data (i.e., extended projected profile (EPP)) supported by the full implementation of ATN B2 and high-resolution wind models - these functionalities will start their implementation within RP4. - SDO#6 and DA 6.1 - Virtual Center, since the instances of the 4Flight System at Rome and Milan ACC will be able to manage virtually other portion of airspace thanks to a complete virtualised IT and COM Infrastructure. - SDO#8 Service-oriented delivery model - DA#8.1 Implement Phase C target architecture and a service-oriented delivery model, as it enables decoupling of service and infrastructure layers through cloud computing - this system configuration will start its deployment within RP4						
Level of impact of the investment	Network level	Improved efficiency for airspace management and augmented prediction of the expected traffic demand, together with support for cross-border and seamless operations.					
	Local level	Better performing ATM systems supporting controllers with advanced ATC tools in performign their tasks.					
Quantitative impact per KPA		Safety: Significant; Environment: Significant; Capacity: Significant; Cost Efficiency: Significant					
Benefits for airspace users and results of the consultation of airspace users' representatives		Airspace users can expect a more safe and efficient provision of ATC services, thanks to better predictions capability, increased flexibility and increased automation. The new ATM system will also allow resource optimization and economies of scale.					
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives					

Name of new major investment 6	***NUOVO SISTEMA ATM DI TORRE***	Reference #	***A6***	Total value of the asset			***22.673.215***
Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
	X						
Description of the asset	The programme objective is to develop and deliver into operations a new ATM Tower platform, supporting both the major Italian Airports (like, for example, Fiumicino, Malpensa, Linate), and the other important airports (Catania, Ciampino, Naples), during the planning and execution of the daily operations. The scope of the programme covers all the 19 Italian Airports that will not be enclosed within the Remote Tower Programme. Special focus will be given in the programme to the use of improved electronic flight strips and improved airport Safety nets.						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	Yes	This investment is related to the system requirements mandated by CP1 Regulation concerning AF1.2.1, addressing AMAN/DMAN integration.					
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan	This programme is instrumental and consistent with the ATM Master Plan taking into account what foreseen within SDO#1 Alerts for reduction of collision risks on taxiways and runways - DA#1.1 Adapt airport ground safety nets, as the new ATM platform will also support implementation of increased ASMGCS levels, including the airport safety nets						
Level of impact of the investment	Network level	Increased integration of airports in the ATM network with better data exchange and prediction capabilities					
	Local level	Increased automation for supporting TWR ATCOs in their task. Increased platform scalability and integration capabilities.					
Quantitative impact per KPA		Safety: Significant; Environment: Negligeable; Capacity: Significant; Cost Efficiency: Negligeable					
Benefits for airspace users and results of the consultation of airspace users' representatives		Airspace users can expect a more safe and efficient provision of ATC services, thanks to better prediction capability and increased automation. The new ATM system will also allow resource optimization and economies of scale.					
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives					

Name of new major investment 7	***SISTEMI, LICENZE/APPLICAZIONI GESTIONALI***	Reference #	***A7***	Total value of the asset			***58.305.000***
Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
						X	
Description of the asset	This asset is related to the evolution of the SW, applications and platforms dealing with the management system of ENAV. The ENAV management system cover the adequate functioning of the company, meeting requirements of the various structures and departments. These measures are required by the continuous evolution of the HW and SW modules of the existing platform, by the need to replace old SW platforms and by additional cybersecurity assets introduced to protect the overall management perimeter of the company Among the measures devoted to new IT management platforms, new back-up platform and new ITSM platform will be delivered, enabling better asset monitoring (both HW and SW) and standardisation of back-up modes for greater compliance with ISO27001 and all regulatory references						
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No						
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan							
Level of impact of the investment	Network level	N.A.					
	Local level	N.A.					
Quantitative impact per KPA		Safety: Negligeable; Environment: Negligeable; Capacity: Negligeable; Cost Efficiency: Significant					
Results of the consultation of airspace users' representatives							
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives					

Name of new major investment 8	***SISTEMI ED APPLICAZIONI IT OPERATIVE***	Reference #	***A8***	Total value of the asset	***65.070.000***

Main category of the investment		New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
				X				
Description of the asset		This programme in related to the evolution and modernisation of Operational IT SW (a basic requirement for operational and ATM purposes), and to the evolution of both operational and management IT HW infrastructure, maximising economies of scale. Among the activities of the programme, the following assets are expected to be modernized: - The technological evolution and in general the consolidation trend of the IT Environment (es. HW hyperconvergent) will be considered Vis-a-Vis the state of the actual infrastructures. A consolidated IT Systems infrastructure model will be delivered also in the context of an updated disaster recovery infrastructure. - server and storage equipment updated for ENAV operational datacenters, in a Virtual Center implementation mode					
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No							
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		This activity is a fundamental enabler for SDO#6 (DA6.1 - Virtual Center) and i SDO#8 (Service-oriented delivery model)						
Level of impact of the investment	Network level	The updates foreseen in this programme are expected to decrease the probability of risks linked to business discontinuity and under performances of the overall IT systems and infrastructure, enabling an additional safety net towards the adequate functioning and improvement of operations						
	Local level	N.A.						

Quantitative impact per KPA	Safety	Environment	Capacity	Cost Efficiency
	Negligeable	Negligeable	Negligeable	Significant

Results of the consultation of airspace users' representatives		
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives

Name of new major investment 9	***AIRPORT COM: EVOLUZIONE E MODERNIZZAZIONE***	Reference #	***A9***	Total value of the asset			***97.225.000***

Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
				X			
Description of the asset	The basic requirement for the investment arises mainly from the need to modernize most of the Ground/Air/Ground radio systems/ equipment on the entire national territory to respond to Reg. EU 2017/373, which requires all on-board/ground voice communications equipment to be equipped with 8.33 kHz channelling capacity. Airport sites where action is planned: Albenga, Alghero, Ancona, Bari, Bologna, Bolzano, Brindisi, Cagliari, Catania, Ciampino, Comiso, Crotone, Cuneo Levaldigi, Firenze, Fiumicino, Foggia, Grottaglie, Lamezia, Lampedusa, Linate, Malpensa, Napoli, Olbia, Orio al serio, Padova, Palermo, Pantelleria, Parma, Perugia, Pescara, Reggio Calabria, Rieti, Rimini, Roma Urbe, Ronchi, Salerno, Torino Caselle, Torino Aeritalia, Treviso, Venezia lido. Further needs are related to the modernization of the radios G/G necessary for the ground handling movements and radios linked with the General Harbour office. The modernization of the radio fleet also makes it possible to prepare the GAG infrastructure for the interface in VoIP technology (perequisite for Voice-Control-Switch virtualisation): for this purpose, VoIP LAN infrastructure will have to be built at each airport site. Moreover, it is foreseen the upgrade of the existing airport VCS M600 still present on the national territory and obsolete as well as upgrade them to VoIP. in the following sites it will be necessary to adapt the existing VCS to allow working in VoIP and preparation of VoIP LAN for connection G/G with neighboring air traffic service units: Olbia, Bari, Bergamo, Firenze, Pantelleria (LDTWR), Alghero, Ancona, Parma (LDTWR), Bari, Bergamo, Catania, Firenze, Napoli, Olbia, Pantelleria, Venezia Tessera. In relation to the ground COM domain, this programm will also deploy dedicated infrastructure (LAN end fiber optics rings) to separate, as far as possible, the ENAV systems from those of other entities (Air Force, Airport Operator) and where applicable pave the way to the setting up of new TWR. Some of th activities in this domain are: - connection and LAN deployment for the transport of data within the airport, Installation of telephony and data cables (copper and fiber optics) in existing or newly built conduits, with the aim of separating the ENAV domain from other entities communication infrastructure and, in addition, installing the optical fiber in the various nodes of the airport and afterwards, preparation for completion of the airport fiber optic ring. - adaptation of field networks through technological modernization of equipment and infrastructure (ducts, transmission media) - Adaptation of LAN networks for data distribution within technical block and TWR environments In addition to the above, as per Implementing Regulation (EU) 2020/469 of 14/02/20, within this set of investments, ENAV has foreseen the realization of the environmental audio recording in the Operating Rooms of the airport ATC units, identified in consideration of the operating, technical and environmental conditions of the single site.					
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No	EU reg 2017/373 EU reg 2020/469					
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		This set of investments has the following link with the ATM Master Plan: - SDO6 and DA6.2 - Flexible and dynamic allocation of different Multiple Remote Tower Modules (MRTMs): this investment will deploy enabling local radio/VCS infrastructure for Retote Towers. - SDO9 and DA9.3 - Minimum Operating Network: this investment will provide all enabling COM infrastructure that will allow further optimisation of COM devices in line with the MON Concept and Design Criteria.					
Level of impact of the investment	Network level	The foreseen virtualisation of VCS will bring additional modularity and flexibility in the operational configurations and the performances of the network will highly benefit from this technical capability. Interventions foreseen in this investment are in line with the existing Minimum Operational Network (MON) concept and the corresponding harmonised principles and design criteria					
	Local level	The investment foreseen will bring at local level higher performance infrastructure					

Quantitative impact per KPA	Safety	Environment	Capacity	Cost Efficiency
	Negligeable	Negligeable	Significant	Significant

Results of the consultation of airspace users' representatives		
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives

Name of new major investment 10	***ACC COM: EVOLUZIONE E MODERNIZZAZIONE***	Reference #	***A10***	Total value of the asset			***63.350.000***

Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
				X			
Description of the asset	This investment is mainly related to the need to upgrade to VoIP the existing ACC VCS. In particular, within this programme there will be the necessary activities for the implementation of ACC server based VCS (on ACCs in Rome and Milan), aimed at enabling virtualization and consequent disaster recovery procedures for the ACCs in the new configuration for the whole italian territory. To realize the above, it is necessary that all remote sites are in VoIP technology, are prepared dedicated VoIP LAN and the network is migrated to the new ENAV NET2 network. Moreover, linked to the previous intervention, there will be a major upgrade of G/A/G radios on local COM sites linked and connected with the ACCs, all over the national territory. In that context, it is also planned to upgrade the remote control and remote control system of the radios at the ENAV centralised TOC (Technical Operations Center) to improve centralised management of remotely located devices. Within the same program will be also performed: - Satellite connection of the emergency sites of the ACC - Satellite connection of RTCC sites - Modernization of the ENAV Radio Bridges on national territory - Activation of new frequencies for Milan ACC and Rome ACC In addition to the above, as per Implementing Regulation (EU) 2020/469 of 14/02/20, within this set of investments, ENAV has foreseen the realization of the environmental audio recording in the Operating Rooms of the ACC units.					

Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No	EU reg 2020/469
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		- SDO6 and DA6.1 - Virtual Center: this investment will contribute to the deploiment of VoIP enabled VCS, which is the technical prerequisite for VCS virtualisation and decoupling of the service delivered and the phisical location where this is delivered. RTCC that will host Remote Towers will benefit from this investment also thanks to the investment over satellite connections. - SDO9 and DA9.4 - Minimum Operating Network: this investment will provide all enabling COM infrastructure that will allow further optimisation of COM infrastructure and services in line with the MON Concept and Design Criteria.
Level of impact of the investment	Network level	The foreseen virtualisation of VCS will bring additional modularity and flexibility in the operational configurations and the performances of the network will highly benefit from this technical capability. Interventions foreseen in this investment are in line with the existing Minimum Operational Network (MON) concept and the corresponding harmonised principles and design criteria
	Local level

Name of new major investment 11	***NAVIGAZIONE E SISTEMI DI CONTROLLO E MISURAZIONE***	Reference #	***A11***	Total value of the asset			***67.343.200***

Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
				X			

Description of the asset		This investment comprise required technological upgrades of ground navigation systems for the provision of navigation services for terminal and enroute operations. The modernization process is a trade-off between the need for technological modernization and the objective of rationalizing conventional navigation aids in favor of satellite-based aid, a process which originates from international regulatory drivers. ENAV started during RP3 with rationalisation of NDB, and is now tackling a rationalisation trend in line with the existing MON Criteria. This strategy makes it possible to pursue the dual objective of evolving towards a conventional VOR Minimum Operational Network (VOR MON) and optimised ILS settlement, and to reduce operating costs for the management and maintenance of the sites. The future resulting MON infrastructure will constitute the back-up network (VOR-DME MON) capable of ensuring at the same time the continuity of operations in case of degradation of performance provided by GNSS systems and the essential reference for aircraft without PBN capacity. the NAV MON Strategy to be deployed through this investment will also bring along the following activities: - GBAS CAT II-III evaluation, demonstration and analysis - GNSS monitoring systems deployment and GNSS signal performance monitoring systems to support the transition to PBN navigation and conventional GNSS back-up systems. - Innovative navigation systems analysis and deployment: active and/or imageless antenna systems. Multipurpose systems (flight assistance, electromagnetic spectrum monitoring, anti-drone systems, combined communication-navigation-surveillance systems for A-PNT applications, etc.). - improved and upgraded measuring platforms and systems: Navigation Aids have to be certified and duly calibrated through measurements and flight checks that are periodically performed. New and modernised platforms and measurement systems will be deployed in order to maintain required service levels of Navigation aids. - Innovative monitoring and control systems: innovative systems for monitoring and controlling the performance of navigation systems, to support testing activities (FAT/SAT) and preventive and corrective maintenance of radio assistance systems, both local (monitoring with drones and new sensors/ground systems) and remote (evolution of the centralised Technical Operations Center at ENAV for Navigation Aids).
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No	EU reg 1048/2018 that mandates GNSS as primary means of navigation by 2030 and requires to have a MON
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		SDO9 and DA9.4 - Minimum Operating Network: this investment will provide further optimisation of NAV infrastructure and services in line with the MON Concept and Design Criteria. SDO9 and DA9.5 - Rationalise ILS and Implement efficiency measures/methods for a more cost-effective maintenance of ILS, providing link between ICAO Doc. 8071 and national CNS provision.
Level of impact of the investment	Network level	The foreseen modernisation and in parallel the optimisation of Navigation aids will bring gradual implementation of local MON for Navigation, in line with the general MON criteria and as such aligned with the expected european network benefits related to Navigation MON deployment.
	Local level	

Quantitative impact per KPA	Safety	Environment	Capacity	Cost Efficiency

Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancillary	Other
				X			

Description of the asset		This investment will allow deployment of the following assets: - MLAT/ADS B system, that will contribute in a cooperative way to the Airport Surveillance System, through a network of sensors (receivers and interrogators) located in the airport area, able to ensure overlapping coverage to the primary coverage guaranteed by the SMRs. The MLAT/ADS B system in general can be defined as a distributed network of multiple 1090Hz receivers working in conjunction with one or more 1030Hz transmitters. The outgoing data are collected by a central computer that processes them and prepares an outgoing surveillance information suitable for integration into a local ATM Surveillance system. The output MLAT Plot/Tracks format should be ASTERIX CAT. 20/19 while the output stream of ADS B should be ASTERIX CAT. 21/19. The MLAT/ADS-B system shall ensure the detection and identification of aircraft and vehicles equipped with appropriate transponders in the Manoeuvring and/or Movement Area, depending on the operational choice of the site. Initially, the sites of Bergamo, Venezia, Bologna and Milan Malpensa (further upgrade of the existing system) will be affected by the programme. - Approach WAM and ADS-B, That will allow ENAV to have a surveillance layer based on WAM technology, which will be able to guarantee coverage throughout the national airspace in compliance with the Surveillance MON performance requirements (opening to further optimisation of SUR means) and to integrate these new SUR information with all security standards through data fusion (set up by the national RDP/SSR network), into the current Surveillance System serving both TMA and enroute.
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	No	
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan		SDO9 and DA9.4 - Minimum Operating Network: this investment will provide further optimisation of SUR infrastructure and services in line with the MON Concept and Design Criteria. SDO9 and DA9.3 - since this investment will implement data fusion of additional Surveillance sensors for enroute and TMA, integrated in the existing surveillance chain in a secure manner. SDO9 and DA9.5, the implementation of new surveillance technologies will enable surveillance infrastructure optimisation
Level of impact of the investment	Network level	The foreseen modernisation and in parallel the optimisation of the Surveillance picture available in Italy, will bring gradual implementation of local MON for Surveillance, in line with the general MON criteria and as such aligned with the expected european network benefits related to surveillance MON deployment.

						X		
Description of the asset	This investment is related to the optimization of weather forecasting systems to support ATC/ATM services in order to reduce operating costs. This investment is also related to the adaptation of weather forecasting systems according to European interoperability and EASA regulations. The program is following the previous automation programme delivered in RP3, implementing some unmanned capabilities where possible and prescribed by technical and operational requirements. The programme of adaptation of the E-AWOS system at national level for the implementation of the Unmanned mode will involve the updating and/or expansion of the airport weather sensors present in airports in order to fully automate this system, while maintaining the current standards of quality and safety. This programme will also deal with the implementation of dedicated forecasting systems for the detection of the phenomenon of low level Wind Shear at airports on the national territory.							
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference	Yes	Part of this investment is related to the activation of the SWIM MET services (as per CP1 AF5.4.1) for airports observations and forecasts, for those sites where ENAV provide the services. It includes: integration of the SWIM modules in the Meteo Forecast Unit;Installation, Integration, Verification, Validation and Testing of the new SWIM services; EUTMETSAT satellite receivers update; Enhanced SWIM services activation.						
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan								
Level of impact of the investment	Network level							
	Local level	The investment will bring benefits for local users of the italian airspace as they will get more accurate and reliable meteo observations and forecasts						
Quantitative impact per KPA		Safety	Environment	Capacity	Cost Efficiency			
		Negligeable	Negligeable	Negligeable	Significant			
Benefits for airspace users and results of the consultation of airspace users' representatives								
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives						

2.1.5 - Details on other new investments for RP4 from table B

Overall description and justification of the costs nature and benefits of other new and existing investments in fixed assets planned over the reference period
Other new investments that will be developed in the framework of RP4 are related to: - Evolution and automation for ATM/AIM/MET sistems that will provide incremental improved performance of the current system, bridging the implementation of a new ATM System. - Technical supervision, simulators and auxiliary and support systems, that will support all preparatory activities towards deployment and will allow management of business continuity in a centralised manner, favoring optimisation of resources - R&D, Safety and security measures that will allow to further investigate the impact of new technologyes in the SESAR pipeline in terms of benefits, performance improvements and costs All these initiatives are part of the ENAV investment plan and can be considered complementary to the New Major investments planned in RP4 and mapped within some of the ATM Master Plan SDO.

2.2.4 - Detail of new major investments for RP4 from table A

NOTE: Section 1.3 (Stakeholder Consultation) should include details on the consultation with airspace users' representatives on new major investments.

Name of new major investment 1	***Radar Sigonella***	Reference #	***A1***	Total value of the asset		***12.000.000***

Main category of the investment	New ATM system	Overhaul of existing ATM system	Other ATM	CNS	Infrastructure	Ancilliary	Other
	x						

Description of the asset	Acquisition of a new ATS surveillance system
Is the investment mandated by a SES Regulation (i.e. PCP/CP1/Interoperability)? If yes please provide description/reference: Yes	Acquisition of a new radar system to replace the existing, outdated equipment, which does not meet EUROCONTROL's standards for MSSR (Monopulse) sensor technology and Mode "S" identification, required by current EU regulations.
For investments in new ATM systems and major overhauls of ATM systems, information on the consistency of the investment with the European ATM Master Plan	
Level of impact of the investment: Network level	

Level of impact of the investment	Local level				
Quantitative impact per KPA		Safety	Environment	Capacity	Cost Efficiency
		Significant	Significant	Significant	Significant
Benefits for airspace users and results of the consultation of airspace users' representatives		The implementation of a state-of-the-art surveillance system will enable better and safer air traffic management in Catania CTR, reduce possible delays to the managed civil/military air traffic and reduce the possibility of radar service interruptions caused by malfunctioning of the outdated surveillance system.			
Joint investment / partnership	No	If yes, please provide reference to joint project and/or indicate reference to cross-border initiatives			

Name of new major investment 2	***Radar Grosseto***		Reference #	***A2***	Total value of the asset			***12.000.000***

	Safety assurance	B	B	B	B	C
	Safety promotion	B	B	B	B	C
	Safety culture	B	B	B	B	C
	Additional comments					

b) Justifications for the local safety performance targets

ENAV:
Local Safety Performance targets are due to the new EoSM questionnaire that envisages new and more difficult to achieve standards especially in the Safety Risk Management Component. ENAV expects to reach the standards requested but time is needed to plan and implement the necessary actions.

** Refer to Annex O, if necessary.*

c) Main measures put in place to achieve the local safety performance targets

ENAV: ENAV is developing a new Safety Plan that will be effective from January the 1st 2025. The new Safety Plan is made of 82 specific actions addressed to the whole organization. The most of these actions are aimed to improve Safety resilience and SMS effectiveness taking in consideration EoSM prescriptions to achieve level D in all Study Areas. All the actions are planned to be completed by the end of 2027.

ITAF: In light of specific regulatory provisions (EU Reg. 2018/1139; Navigation Code Approved with Royal Decree 30 March 1942, n. 327; Legislative Decree 15/03/2010 n. 66; Presidential Decree 15/03/2010 n. 90) that have been fully implemented in the ITAF-ENAC Agreement of march 22nd 2023 and the subsequent Technical Agreement between the Parties, ITAF guarantees levels of safety and interoperability equivalent to those provided by current national and international regulations on the provision of air navigation services to general air traffic .
According to internal procedure, ITAF has already in place an SMS process. Every year, ITAF sends the result of safety issues and the remedial actions put in place. Until now, ITAF doesn't follow the EoSM questionnaire to measure their performance because it isn't binding. The lack of historical values comparable to the requirements of the EoSM questionnaire does not allow us to provide information for years 2025-2028 supported by real and/or statistical data. For this reason, also if 2024 is still under RP3, we start to use the EoSM in 2025, for 2024 reference, so we can start to understand how the system is working with reference to EoSM approach and how to set it to work better in that way.

** Refer to Annex O, if necessary.*

SECTION 3.2: ENVIRONMENT KPA

3.2 - Environment targets

3.2.1 - Environment KPI #1: Horizontal en route flight efficiency (KEA)

a) Environment national performance targets

b) Justifications for the local environment performance targets

c) Main measures put in place to achieve the environment performance targets

Annexes of relevance to this section

ANNEX P. JUSTIFICATIONS FOR THE LOCAL ENVIRONMENT TARGETS

3.2 - Environment targets

3.2.1 - Environment KPI #1: Horizontal en route flight efficiency (KEA)

a) National environment performance targets

	2025	2026	2027	2028	2029
National reference values	2,75%	2,70%	2,67%	2,64%	2,61%

	2025	2026	2027	2028	2029
	Target	Target	Target	Target	Target
National targets	2,75%	2,70%	2,67%	2,64%	2,61%

b) Justifications for the local environment performance targets

1) Although the Italian values for environment are in line with those provided by the European Commission, it is important to underline that criteria fully under control of the ANSP allow a more accurate evaluation of its performance.
2) The lowering of the FRA area to FL 195, together with the activation of cross-border operations with SECSI FRA and FRA connectivity iwth TMAs, as of 21st March 2024 (almost 2 years ahead of the EU Reg. 116/2021 deadlines), brings the en-route airspace organization to the highest attainable level of efficiency.

** Refer to Annex P, if necessary.*

c) Main measures put in place to achieve the local environment performance targets

Several measures have been put in place/planned in line with the ENAV business and investment plan and the ENAV Flight Efficiency Plan:
- Lowering to FL 195 of the Free Route Airspace Italy (FRA-IT), achieved in March 2024
- Free Route cross border operations implemented in the Balkan quadrant and north-eastern area (SECSI FRA), achieved in March 2024
- FRA connection with TMAs
- PBN procedures directly connected with FRA
- Flexible Use of Airspace (FUA), ongoing
- Cross border operations FRA IT with FRA MT, planned
- Dynamic RAD, first implementations underway, completion planned
- National Airspace Restructuring Programme, feasibility underway, planned

** Refer to Annex P, if necessary.*

SECTION 3.3: CAPACITY KPA

3.3 - Capacity targets

3.3.1 - Capacity KPI #1: En route ATFM delay per flight

a) National capacity performance targets

b) Justifications for the local en route capacity performance targets

c) Main measures put in place to achieve the local en route capacity performance targets

3.3.2 - Capacity KPI #2: Terminal and airport ANS ATFM arrival delay per flight

a) National capacity performance targets

b) Justifications for the local terminal capacity performance targets, including contribution to the improvement of the European ATM network performance

c) Main measures put in place to achieve the local terminal capacity performance targets

3.3.3 - ATCO planning

a) ATCOs in the scope of the performance plan

b) ATCO planning at ACC level

c) ATCO training

Annexes of relevance to this section

ANNEX Q. JUSTIFICATIONS FOR THE LOCAL CAPACITY TARGETS

3.3 - Capacity targets

3.3.1 - Capacity KPI #1: En route ATFM delay per flight

a) National capacity performance targets

	2025	2026	2027	2028	2029
National reference values	0,28	0,20	0,13	0,13	0,13

	2025	2026	2027	2028	2029
	Target	Target	Target	Target	Target
National targets	0,28	0,20	0,13	0,13	0,13

b) Justifications for the local en route capacity performance targets

We assume the local reference value capacity indicated by EC in the mail on May 14th. In setting the targets for RP4, we would have expected a different consideration of the impact of "weather" on the level of performance.
In particular, we expected due consideration to both the development of bad weather in recent years and, above all, the delay that could be created by the impact of weather on airline planning with significant fluctuations in traffic demand, leading to the need for adjustments on sectors bordering those affected by bad weather that are otherwise unaffected by lack of capacity.

In the five years identifying RP4, several efficiency and technological innovation actions are planned, the heaviest of which is the replacement of the entire ATM platform with the implementation of CoFlight/4Flight. The targets should also take into account these important innovations, considering the delay history of other providers who have faced such changes in the recent period.

More detailed information has been provided in Annex Q.

** Refer to Annex Q, if necessary.*

c) Main measures put in place to achieve the local en route capacity performance targets

A Flexible Configuration concept, combined with Flexible Rostering, to ensure first rotation and to be able to change operational sector configurations to adapt the allocated airspace to fluctuations in traffic demand; RAD reduction. Multi Sector Planner organization.
Furthermore, as reported in the NOP:
- in line with ENAV industrial plan, the AoR of Brindisi ACC will be gradually transferred to Roma ACC by 2027.
- approach Service Re-allocation (Implementation of Genova/Bologna/Firenze by 2026 and Palermo by 2027/2029).
- Extended AMAN Milano ACC 2027
- 4Flight ATM system implementation in Roma ACC by 2027 and Milano by 2029.

More detailed information has been provided in Annex Q.

** Refer to Annex Q, if necessary.*

3.3.2 - Capacity KPI #2: Terminal and airport ANS ATFM arrival delay per flight

a) National capacity performance targets

	2025	2026	2027	2028	2029
	Target	Target	Target	Target	Target
National targets	0,35	0,35	0,35	0,35	0,35
Additional comments	The target include 46 airports as detailed below. More details are provided for the big 5 airports already included in the RP3 performance plan and incentive scheme. The remaining airports are considered at aggregated level.

3.3.3 - ATCO planning and training

ENAV

a) ATCOs in the scope of the performance plan

ATCOs in the scope of the performance plan		Actual	Forecast	Planned				
		2023	2024	2025	2026	2027	2028	2029
Number of ATCO in OPS (year-end FTEs) employed by the ANSP (for services within the scope of the performance plan)	ACC	896	882	942	999	1053	1099	1147
	APP	70	68	64	18	17	16	0
	TWR	763	763	769	791	791	791	791
Number of ATCOs in OPS (year-end FTEs) allocated to the en route cost base(s)*		966	950	1006	1017	1070	1115	1147
Number of ATCO on other duties (year-end FTEs) employed by the ANSP		245	245	245	245	245	245	245

b) ATCO planning at ACC level

	Actual	Forecast	Planned				
Brindisi (LIBB ACC)	2023	2024	2025	2026	2027	2028	2029
Number of additional ATCOs in OPS planned to start working in the OPS room (FTEs)	0	0	0	0	0	0	0
Number of ATCOs in OPS planned to stop working in the OPS room (FTEs)	0	4	1	6	0	5	5
Number of ATCOs in OPS planned to be operational at year-end (FTEs)	87	83	82	76	76	71	66

	Actual	Forecast	Planned				
Milano (LIMM ACC)	2023	2024	2025	2026	2027	2028	2029
Number of additional ATCOs in OPS planned to start working in the OPS room (FTEs)	0	0	30	30	30	30	30
Number of ATCOs in OPS planned to stop working in the OPS room (FTEs)	0	1	4	7	5	8	8
Number of ATCOs in OPS planned to be operational at year-end (FTEs)	287	286	312	335	360	382	404

	Actual	Forecast	Planned				
Padova (LIPP ACC)	2023	2024	2025	2026	2027	2028	2029
Number of additional ATCOs in OPS planned to start working in the OPS room (FTEs)	0	0	30	30	30	30	30
Number of ATCOs in OPS planned to stop working in the OPS room (FTEs)	0	1	6	3	5	6	5
Number of ATCOs in OPS planned to be operational at year-end (FTEs)	197	196	220	247	272	296	321

	Actual	Forecast	Planned				
Rome (LIRR ACC)	2023	2024	2025	2026	2027	2028	2029
Number of additional ATCOs in OPS planned to start working in the OPS room (FTEs)	0	0	30	30	30	30	30
Number of ATCOs in OPS planned to stop working in the OPS room (FTEs)	0	8	19	17	26	25	24
Number of ATCOs in OPS planned to be operational at year-end (FTEs)	325	317	328	341	345	350	356

Additional comments
The plan takes into account the reallocation of the Local Approach Unit of Firenze, Bologna, Genova and Palermo in the ACCs (3.3.3 a).

c) ATCO Training

ATCO trainees of the ANSP		Actual	Forecast	Planned				
		2023	2024	2025	2026	2027	2028	2029
Number of trainees planned to enter the training program(s) during the year.		67	90	144	128	90	90	90

Number of trainees expected to complete the training program(s) during the year based on statistical estimates.		91	104	104	144	128	90	90
Number ATCO trainees at year end.		91	104	104	144	128	90	90

Description of the training process, including details on the average failure rate and the process used to allocate newly qualified ATCOs between ACC, APP and TWR positions.
The process involves four different types of training courses, two for ATCOs employed in ACCs and two for ATCOs employed in TWRs. The ATCOs of the ACCs will be trained for the enroute sectors (ACS courses) and for the approach sectors (APS courses). TWR ATCOs will be trained to achieve the ADI with surveillance or only the ADI plus the APS without surveillance. Regarding success rates, we have a 70% success rate in the ACS courses, which is higher than 90% in the other three training courses. Personnel coming out of the ACS and APS courses, who come from the control towers, are sent to the ACCs, where we now provide, in addition to the Enroute service, the approach service for almost all airports. Personnel coming from the entry level in Enav, i.e. FISO personnel, after the basic training courses, are sent to the control towers of airports with low traffic and then, after the Surveillance course, to the control towers of strategic airports. The duration of the specific training modules (e.g. ab initio, ADC, APP, APS, ACS) ranges from 7 to 14 weeks. The training activities are provided by the ENAV Academy and internal resources.

SECTION 3.4: COST-EFFICIENCY KPA

3.4 - Cost-efficiency targets

3.4.1 - Cost-efficiency KPI #1: Determined unit cost (DUC) for en route ANS

En Route Charging Zone #x

a) RP4 cost-efficiency performance targets
b) Information on the baseline values for the determined costs and the determined unit costs
c) Detailed justifications for the adjustments to the baseline values
d) Justification of the consistency of the local cost-efficiency performance targets with the Union-wide targets
e) Where a deviation from the Union-wide performance targets is observed, please indicate if the NSA considers those deviations to be necessary and proportionate
f) Main measures put in place to achieve the targets for determined unit cost (DUC) for en route ANS
g) Verification by the NSA

3.4.2 - Cost-efficiency KPI #2: Determined unit cost (DUC) for terminal ANS

Terminal Charging Zone #x

a) RP4 cost-efficiency performance targets
b) Information on the baseline values for the determined costs and the determined unit costs
c) Detailed justifications for the adjustments to the baseline values
d) Justifications for the local terminal cost-efficiency performance targets, including contribution to the improvement of the
e) Main measures put in place to achieve the targets for determined unit cost (DUC) for terminal ANS
f) Verification by the NSA

3.4.3 - Cost Allocation ATSP/CNSP

ATSP/CNSP #x

a) Summary of services provided
b) Allocation of costs by segment
c) Allocation of costs related to the provision of approach services
d) Description of other services and activities outside the scope of the performance plan and their financing
e) Changes in cost allocation
methodology
f) Verification by the NSA

3.4.4 - Cost Allocation METSP

METSP #x

a) Summary of services provided
b) Allocation of costs by segment
c) Breakdown of determined meteorological costs between direct and core costs and allocation between en route and terminal services
d) Meteorological direct costs and allocation across charging zone(s)
e) Meteorological core costs and allocation across charging zone(s)
f) Changes in cost allocation methodology
g) Verification by the NSA

3.4.5 - Cost allocation NSA

a) Supervision costs
b) Search and rescue costs (if reported as part of the NSA costs)
c) Changes in cost allocation methodology
d) Verification by the NSA

3.4.6 - Determined costs assumptions

ANSP #x

3.4.6.1 - Operating costs
3.4.6.2 - Capital costs
3.4.6.3 - Costs for VFR exempted flights
3.4.6.4 - NSA verification

3.4.7 - Pension assumptions

3.4.7.1 Total pension costs
3.4.7.2 Assumptions for the "State" pension scheme
3.4.7.3 Assumptions for the occupational "Defined contributions" pension scheme
3.4.7.4 Assumptions for the occupational "Defined benefits" pension scheme

3.4.8 - Interest rate assumptions for loans financing the provision of air navigation services

3.4.9 - Additional determined costs related to measures necessary to achieve the en route capacity targets

a) Overall description of the measures necessary to achieve the en-route capacity targets for RP4, which induce additional costs

b) Detailed information on the additional costs of measures necessary to achieve the capacity targets for RP4
c) Detailed information on the additional costs of measures necessary to achieve the capacity targets for RP4 by nature by ANSP

d) Demonstration that the deviation from the Union-wide targets is exclusively due to the additional determined costs related to measures necessary to achieve the performance targets in capacity

3.4.10 - Restructuring costs

3.4.10.1 Restructuring costs from previous reference periods to be recovered in RP4
3.4.10.2 Restructuring costs planned for RP4

c) Detailed justifications for the adjustments to the baseline values

c.1) Adjustments to the 2019 baseline value for the determined costs

Number of adjustments	0

Total adjustments to the 2019 baseline value for the determined costs	**Costs nominal NC**	**Costs real NC**	**Costs EUR2022**
	-	-	-

c.2) Adjustments to the 2019 service units

	Actual service units (M2)	Coefficient M2/M3	Source	Actual service units (M3)	Service units adjustment
Impact of transition to actual route flown	10.045.778	0,00%	Other	10.045.778	-

Other adjustment to the 2019 service units	No

Total adjustments to the 2019 service units	-

c.3) Adjustments to the 2024 baseline value for the determined costs

Number of adjustments	0

c.4) Adjustments to the 2024 service units

Other adjustment to the 2024 service units	No

d) Justification of the consistency of the local en route cost-efficiency performance targets with the Union-wide targets

In overall terms, with reference to RP4, starting from the 2024 forecast figures Italy has planned an average economic performance in terms of DUC of about -1,2%. Such value also consider the Space Weather costs for Italy and IRIS costs. In the combined period 2019-2029, Italy will provide to the European network an average efficiency of -2,7%. Please note that in line with RP3, Italy has decided not to take advantage of the correction factor and therefore is applying a zero coefficient. Such decision has been adopted in order to maintain a realistic baseline.

** Refer to Annex R, if necessary.*

e) Where a deviation from the Union-wide performance targets is observed, please indicate if the NSA considers those deviations to be necessary and proportionate under:

Additional costs of measures necessary to achieve the capacity targets for RP4	No	
Restructuring costs planned for RP4	No	

f) Main measures put in place to achieve the targets for determined unit cost (DUC) for en route ANS

For the years of RP4, the Company has planned actions to contain and rationalize costs that are not related to operational and technological continuity. Please also consider that the efficiencies expected for the next Reference Period will be in continuity with what has already been implemented in the period 2019-2024.
In particular:
•Structural measures related to the organisation and/or management of ANS, which lead to enhanced cost-efficiency of service provision: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures to improve productivity: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures related to the optimization of support services (e.g. overhead, training) including through cooperation, consolidation or outsourcing arrangements: Reduction of support cost not directly correlated to air traffic services and reduction of overhead staff.
It is important to stress that the proposed level of costs represents for ENAV the upper limit in terms of cost efficiency safeguarding safety and capacity and that no additional cost cutting actions can be put in place without impacts on them. In fact, ENAV planning considers the existence of important interdependencies amongst the different performance areas (and, with reference to the cost efficiency, this important interdependency exists also amongst the different cost categories), which takes into account of the risks and of the economic and financial stability of the Company. For what above, any possible change on one cost category will necessarily require a revision (partial or total) of the other cost categories. That implies that if an additional cost cut will be required in any determined cost category, it will increase partially or totally the other cost categories.

** Refer to Annex R, if necessary.*

g) Verification by the NSA

Confirmation by the NSA that the data and information included in this section have been verified in accordance with Art. 22(7) of IR 2019/317	Yes

c.1) Adjustments to the 2024 baseline value for the determined costs

Number of adjustments	0

c.2) Adjustments to the 2024 service units

Adjustment to the 2024 service units	No

d) Justifications for the local terminal cost-efficiency performance targets, including contribution to the improvement of the European ATM network performance

In the first week of July 2024 Italy has launched a public consultation and a discussion at national level on the revision of the Terminal Charging Zones, with the scope of being both fully aligned with Reg. 317/ 2019 and of further speeding - up the competitiveness and the attractiveness of the Italian Airport network in order to support the expected future traffic increases. The final solution identified, consisted in the establishment of two charging zones - which differ from RP3 ones for their composition - both falling under the umbrella of the Performance Scheme. In particular New TCZ 1 comprises the airports that in RP3 are included in TCZ 1 and TCZ 2 (i.e., Roma Fiumicino, Milano Malpensa, Milano Linate, Bergamo Orio al Serio and Venezia Tessera).
The new Terminal Charging Zones will apply starting from 2025 and such terminal organisation will ensure further transparency and consistency for the entire RP4 while facilitating analysis and assessments for NSA and European Commission.
For what concerns the definition of the RP4 Service Units forecasts for the new two charging zones, the baseline value (2024 forecast) for TCZ1 has been defined considering actual traffic up to October 2024 and the expected projections of traffic for the remaining two months. The trend of the terminal SUs for RP4 in its entirety has taken into account recently published STATFOR October 2024 forecast, and it has been estimated considering the average growth between the base and high scenario of STATFOR October 2024 forecast, which has been applied from 2026 onwards.

** Refer to Annex R, if necessary.*

e) Main measures put in place to achieve the targets for determined unit cost (DUC) for terminal ANS

For the years of RP4, the Company has planned actions to contain and rationalize costs that are not related to operational and technological continuity. Please also consider that the efficiencies expected for the next Reference Period will be in continuity with what has already been implemented in the period 2019-2024.
In particular:
•Structural measures related to the organisation and/or management of ANS, which lead to enhanced cost-efficiency of service provision: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures to improve productivity: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures related to the optimization of support services (e.g. overhead, training) including through cooperation, consolidation or outsourcing arrangements: Reduction of support cost not directly correlated to air traffic services and reduction of overhead staff.
It is important to stress that the proposed level of costs represents for ENAV the upper limit in terms of cost efficiency safeguarding safety and capacity and that no additional cost cutting actions can be put in place without impacts on them. In fact, ENAV planning considers the existence of important interdependencies amongst the different performance areas (and, with reference to the cost efficiency, this important interdependency exists also amongst the different cost categories), which takes into account of the risks and of the economic and financial stability of the Company. For what above, any possible change on one cost category will necessarily require a revision (partial or total) of the other cost categories. d) Justifications for the local terminal cost-efficiency performance targets, including contribution to the improvement of the European ATM network performance

In the first week of July 2024 Italy has launched a public consultation and a discussion at national level on the revision of the Terminal Charging Zones, with the scope of being both fully aligned with Reg. 317/ 2019 and of further speeding - up the competitiveness and the attractiveness of the Italian Airport network in order to support the expected future traffic increases. The final solution identified, consisted in the establishment of two charging zones - which differ from RP3 ones for their composition - both falling under the umbrella of the Performance Scheme. In particular:
•New TCZ 1: it comprises the airports that in RP3 are included in TCZ 1 and TCZ 2 (i.e., Roma Fiumicino, Milano Malpensa, Milano Linate, Bergamo Orio al Serio and Venezia Tessera).
•New TCZ 2: it includes 44 airports as follows:
o 41 ENAV airports;
o3 ITAF airports (Pisa, Grosseto and Trapani). Please note that ITAF airports are not subject to traffic risk sharing and incentive scheme for capacity.
The new Terminal Charging Zones will apply starting from 2025 and such terminal organisation will ensure further transparency and consistency for the entire RP4 while facilitating analysis and assessments for NSA and European Commission. In RP4, the new TCZ2 foresees the inclusion, under the umbrella of ENAV service provision, of Aosta airport which up to 2024 is privately managed. According to that change, the airports served by ENAV move from 40 as in RP3, to 41 in RP4. Moreover, Salerno airport will have the upgrade of the service from AFIS to Tower in RP4. Other airports, such as Crotone, Parma, Forlì, Rimini, Cuneo, Comiso, will have an extension in the opening hours in RP4. Such changes have been taken into consideration when assessing ENAV cost levels in 2024.
For what concerns the definition of the RP4 Service Units forecasts for the new two charging zones, the baseline value (2024 forecast) for TCZ2 it has been estimated taking into account the actual traffic recorded in the first nine months of the year and the expected projections of traffic for the remaining three months.

** Refer to Annex R, if necessary.*

e) Main measures put in place to achieve the targets for determined unit cost (DUC) for terminal ANS

For the years of RP4, the Company has planned actions to contain and rationalize costs that are not related to operational and technological continuity. Please also consider that the efficiencies expected for the next Reference Period will be in continuity with what has already been implemented in the period 2019-2024.
In particular:
•Structural measures related to the organisation and/or management of ANS, which lead to enhanced cost-efficiency of service provision: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures to improve productivity: Increase of FTEs – reduction of overtime – improvement of the performance – development of the investments and technology supporting air traffic services;
•Measures related to the optimization of support services (e.g. overhead, training) including through cooperation, consolidation or outsourcing arrangements: Reduction of support cost not directly correlated to air traffic services and reduction of overhead staff.
It is important to stress that the proposed level of costs represents for ENAV the upper limit in terms of cost efficiency safeguarding safety and capacity and that no additional cost cutting actions can be put in place without impacts on them. In fact, ENAV planning considers the existence of important interdependencies amongst the different performance areas (and, with reference to the cost efficiency, this important interdependency exists also amongst the different cost categories), which takes into account of the risks and of the economic and financial stability of the Company. For what above, any possible change on one cost category will necessarily require a revision (partial or total) of the other cost categories. That implies that if an additional cost cut will be required in any determined cost category, it will increase partially or totally the other cost categories.

** Refer to Annex R, if necessary.*

3.4.3 - Cost allocation ATSP/CNSP - ENAV

Complementary information may be provided in ANNEX M

a) Summary of services provided

Air navigation services provided		Description of the services provided by the concerned entity
ATS/ATM	Yes	The allocation for air navigation services (i.e. ATM, COM, NAV, SOR, AIS, MET) has been done based on the analysis of the following specific elements for each service: the kind of activity done by the operational and technical Human Resources, the specific activity done by some overhead centres of coordination and support, the usage destination of ENAV assets, the correlation between some costs and specific services.
Communication	Yes	See above
Navigation	Yes	See above
Surveillance	Yes	See above
Search and rescue	No	Not applicable
Aeronautical Information	Yes	See above
Meteorological services	Yes	See above
Services to OAT	No	Not applicable
Cross-border ATS	No	Not applicable

Description of the methodology used for allocating costs of facilities or services between different air navigation services based on the list of facilities and services listed in ICAO Regional Air Navigation Plan European Region (Doc 7754) as last amended and a description of the methodology used for allocating those costs between different charging zones.

ENAV analytical accounting model determines the full costs and revenues of En-route and Terminal services and of the sales of other minor (unregulated) services. It produces the Income Statement of operational Sites (Area Control Centre and airports) and of sales projects in order to monitor the direct and indirect costs, operational efficiency and profitability.
Since 2005 an external auditing company certifies that the accounting separation amongst En-Route, Terminal and Other Businesses is done in accordance with the defined model. Law 248 of December 2nd, 2005 (article 11 sexties, paragraph 7bis) assigns to ENAV the task to adopt "an analytical accounting system certified by an auditing company that allows the identification of revenues and costs related to each service, regulated and unregulated". Therefore, since 2006 the certification has become a legal requirement for ENAV.
The analytical accounting system gathers costs and revenues (by nature and by cost centres and sales projects) and allocates them to the institutional En-Route and Terminal Services and to the other businesses.
Overheads related to General & Administrative and Coordination & Support units and costs and revenues that cannot be, in an exclusive way, linked to an operational site or to a sales project, are allocated to the operational sites and to the other businesses according with specific allocation drivers.
Whenever an operational site provides at the same time services both for en-route and terminal, costs are allocated between the two services. This allocation considers the specific features of the site such as, for example, the proportion of the managed airspace within a radius of 20 km from the airport, the type of service provided, the technology used, any service delegation, etc. It should be noted that this criterion of the "20 km radius" was identified and validated in a specific working group in Eurocontrol, which, with the support of ENAV technical-operational staff, evaluated the distance traveled by aircraft arriving and departing on the routes (STAR and SID respectively) to/from the airport in question, determining an allocation coefficient, by the following formula: (medium distance SIDSTAR-20KM)/medium distance SIDSTAR. On the basis of this formula, the shares of the common costs to be allocated to the Route and Terminal services are then determined proportionally.
The accounting separation procedures, that have been developed using Oracle Application systems functionality and Oracle Hyperion, ensure that the cost accounting results match with the approved financial statements.
Moreover, the allocation for air navigation services (i.e. ATM, COM, NAV, SOR, AIS, MET) has been done in a statistical way taking into account, for each service, the kind of activity done by the operational and technical Human Resources, the specific activity done by some overhead centres of coordination and support, the usage destination of ENAV assets, the correlation between some costs and specific services.
As already stated in RP3, in order to guarantee that no cross-financing amongst en route and terminal applies during the years of RP3, the percentages of actual cost allocation of the 2020 actual, as certified by the external auditing company, will be kept constant for the entire RP3 for all charging zones, allowing therefore a punctual verification of differences between planned and actual figures. According to what above, actuals for 2023 have been calculated using the same proportions used for RP3 planning (i.e., proportions of cost allocation for 2020 actual costs).

b) Allocation of costs by segment

ANSP costs by segments (in nominal terms in '000 national currency)	2025	2026	2027	2028	2029
Determined costs for en route charging zone(s) in the scope of the performance plan	648.786.596	676.047.064	704.264.557	725.624.179	740.400.916
Determined costs for terminal charging zone(s) in the scope of the performance plan	230.947.340	241.651.188	253.634.707	260.231.039	268.078.088
Forecasted costs for terminal services at airports outside the scope of the performance plan	0	0	0	0	0

Description of the criteria used to allocate costs between terminal and en route services in accordance with Article 22(5), including at airports outside the scope of the performance plan

ENAV analytical accounting model determines the full costs and revenues of En-route and Terminal services and of the sales of other minor (unregulated) services. It produces the Income Statement of operational Sites (Area Control Centre and airports) and of sales projects in order to monitor the direct and indirect costs, operational efficiency and profitability.
Since 2005 an external auditing company certifies that the accounting separation amongst En-Route, Terminal and Other Businesses is done in accordance with the defined model. Law 248 of December 2nd, 2005 (article 11 sexties, paragraph 7bis) assigns to ENAV the task to adopt "an analytical accounting system certified by an auditing company that allows the identification of revenues and costs related to each service, regulated and unregulated". Therefore, since 2006 the certification has become a legal requirement for ENAV.
The analytical accounting system gathers costs and revenues (by nature and by cost centres and sales projects) and allocates them to the institutional En-Route and Terminal Services and to the other businesses.
Overheads related to General & Administrative and Coordination & Support units and costs and revenues that cannot be, in an exclusive way, linked to an operational site or to a sales project, are allocated to the operational sites and to the other businesses according with specific allocation drivers.
Whenever an operational site provides at the same time services both for en-route and terminal, costs are allocated between the two services. This allocation considers the specific features of the site such as, for example, the proportion of the managed airspace within a radius of 20 km from the airport, the type of service provided, the technology used, any service delegation, etc. It should be noted that this criterion of the "20 km radius" was identified and validated in a specific working group in Eurocontrol, which, with the support of ENAV technical-operational staff, evaluated the distance traveled by aircraft arriving and departing on the routes (STAR and SID respectively) to/from the airport in question, determining an allocation coefficient, by the following formula: (medium distance SIDSTAR-20KM)/medium distance SIDSTAR. On the basis of this formula, the shares of the common costs to be allocated to the Route and Terminal services are then determined proportionally.
The accounting separation procedures, that have been developed using Oracle Application systems functionality and Oracle Hyperion, ensure that the cost accounting results match with the approved financial statements.
Moreover, the allocation for air navigation services (i.e. ATM, COM, NAV, SOR, AIS, MET) has been done in a statistical way taking into account, for each service, the kind of activity done by the operational and technical Human Resources, the specific activity done by some overhead centres of coordination and support, the usage destination of ENAV assets, the correlation between some costs and specific services.
As already stated in RP3, in order to guarantee that no cross-financing amongst en route and terminal applies during the years of RP3, the percentages of actual cost allocation of the 2020 actual, as certified by the external auditing company, will be kept constant for the entire RP3 for all charging zones, allowing therefore a punctual verification of differences between planned and actual figures.
According to what above, actuals for 2023 have been calculated using the same proportions used for RP3 planning (i.e., proportions of cost allocation for 2020 actual costs).

c) Allocation of costs related to the provision of approach services

Allocation of costs related to approach services (in nominal terms in '000 national currency)	2025	2026	2027	2028	2029
Total determined costs for approach services	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Determined costs for approach services allocated to the en route charging zone(s)	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Determined costs for approach services allocated to the terminal charging zone(s) within the scope of the performance plan	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*

Description of the methodology used for establishing approach costs and allocating them between en route and terminal services, including the distance from the relevant airport(s) used for allocating approach costs and description of the operational requirements on the basis of which that distance has been defined
The current analytical accounting model of ENAV, certified by external audit company, has been defined on the basis of the requirements provided both by the Italian National law 248/05. The accounting model of the Company allows the separation of the costs and the revenues between the Regulated market (En route and Terminal) and the Unregulated market (activities in iure privatorum). Within the Regulated market, the analytical accounting model allows the allocation of the costs and the revenues for the air traffic navigation services into the two main cash generating unit, that are en-route and terminal. In the current analytical system, as well as in the general accounting of the Company, it is not possible to identify the detail of the approach costs, as well as of the costs for ground-ground/communication or air-ground communications services. ENAV has recently launched an upgrading of the cost accounting system, which will allow to meet this requirement. Due the complexity of the analytical accounting system, it has been necessary to entrust the activities to external consultant IT team. At the same time, it will be necessary to review the internal accounting procedure, with the aim to allows the operational staff to input in the analytical system their working hours on these specific services. This phase will take some months of work. The target (to conclude the project) is fixed for the end of the year 2025.

d) Description of other services and activities outside the scope of the performance plan and their financing

Based on the description of the services provided under item a) above, describe the nature of the activities outside the scope of the performance plan, the related costs and the arrangements in place to finance them as well as the methodology used by the NSA to ensure that these amounts are excluded from the cost bases charged to airspace user

Terminal ANS at airports (outside the scope of the performance plan)	No
Services to OAT	No
Other ANS	No
Non ANS	No

e) Changes in cost allocation methodology

Are there changes in the cost allocation criteria with respect to the previous reference period? If yes, please provide the description and justification of the changes and impact(s) on the determined costs and/or baseline.	Yes
National fund (30 mil €) refund to ENAV (art. 11 septies of Law 248/2005) to compensate for the costs related to the security deducted directly from operating costs: - same amount but applied entirely to terminal and not to en-route; - To increase competitiveness of airports in the new zone 1 and 2; - Full in compliance with the aim of the law that addresses this national fund to compensate costs related to security of infrastructures.	

f) Verification by the NSA

Confirmation by the NSA that the data and information included in this section have been verified in accordance with Art. 22(7) of IR 2019/317	Yes

3.4.3 - Cost allocation ATSP/CNSP - ITAF

Complementary information may be provided in ANNEX M

a) Summary of services provided

Air navigation services provided		Description of the services provided by the concerned entity
ATS/ATM	Yes	
Communication	Yes	
Navigation	Yes	
Surveillance	Yes	
Search and rescue	Yes	Not charged to Civil Aviation
Aeronautical Information	No	Not charged to Civil Aviation
Meteorological services	Yes	
Services to OAT	Yes	Not charged to Civil Aviation
Cross-border ATS	No	

Description of the methodology used for allocating costs of facilities or services between different air navigation services based on the list of facilities and services listed in ICAO Regional Air Navigation Plan European Region (Doc 7754) as last amended and a description of the methodology used for allocating those costs between different charging zones
In accordance with Article 12(1) and (2) of the service provision Regulation, owing to the legal status of ITAF, full compliance with the international accounting standards is not possible. To achieve compliance to the maximum possible extent an ad hoc methodology has been developed to determine the cost of the service provided for Civil Aviation. The main features are the following: Search and rescue, Services to OAT and Aeronautical Information Service, are not charged to Civil Aviation. About other services, only a part of the total amount of costs for air navigation services are allocated to civil aviation, using appropriate sharing keys. In principle, costs are attributed to civil aviation globally for the resources acquired for their exclusive needs and pro-rata percentage for the resources acquired for common needs, mainly dividing them using the traffic data managed in the year, and other technical criteria in relation to the different cost elements

b) Allocation of costs by segment

ANSP costs by segments (in nominal terms in '000 national currency)	2025	2026	2027	2028	2029
Determined costs for en route charging zone(s) in the scope of the performance plan	56.582	57.583	58.589	59.627	61.173
Determined costs for terminal charging zone(s) in the scope of the performance plan	17.986	18.585	19.074	19.598	20.227
Forecasted costs for terminal services at airports outside the scope of the performance plan					

Description of the criteria used to allocate costs between terminal and en route services in accordance with Article 22(5), including at airports outside the scope of the performance plan
In accordance with Article 12(1) and (2) of the service provision Regulation, owing to the legal status of ITAF, full compliance with the international accounting standards is not possible. To achieve compliance to the maximum possible extent an ad hoc methodology has been developed to determine the cost of the service provided for Civil Aviation. TWR costs are allocated 100% to terminal, SCCAM costs are allocated 100% to en route, APP costs are allocated between en route and terminal services on the basis of a pre-established percentage (75% en route, 25% terminal). Operating costs are allocated on the basis of the percentage of use for the AC, which depends by the average cost of personnel employed in the en route and terminal services. In the scope of the Performance Plan ITAF costs are only related to en route charging zone. For costs related to terminal services at airports outside the scope of the performance plan, ITAF does not provide any information becouse they are out of scope.

c) Allocation of costs related to the provision of approach services

Allocation of costs related to approach services (in nominal terms in '000 national currency)	2025	2026	2027	2028	2029
Total determined costs for approach services					
Determined costs for approach services allocated to the en route charging zone(s)					
Determined costs for approach services allocated to the terminal charging zone(s) within the scope of the performance plan					

Description of the methodology used for establishing approach costs and allocating them between en route and terminal services, including the distance from the relevant airport(s) used for allocating approach costs and description of the operational requirements on the basis of which that distance has been defined
In accordance with Article 12(1) and (2) of the service provision Regulation, owing to the legal status of ITAF, full compliance with the international accounting standards is not possible. To achieve compliance to the maximum possible extent an ad hoc methodology has been developed to determine the cost of the service provided for Civil Aviationt. The methodology for determining approach costs is the same used for other services. The APP costs are allocated between en route and terminal services on the basis of a pre-established percentage (75% en route, 25% terminal). Operating costs are allocated on the basis of the percentage of use for the AC, which depends by the average cost of personnel employed in the en route and terminal services. It's not possible provide allocation of costs related to approach services due to the metodology in use that provide evidence of en route costs and terminal cost, in line with table 1 of regulation 317/2019.

d) Description of other services and activities outside the scope of the performance plan and their financing

Based on the description of the services provided under item a) above, describe the nature of the activities outside the scope of the performance plan, the related costs and the arrangements in place to finance them as well as the methodology used by the NSA to ensure that these amounts are excluded from the cost bases charged to airspace user

Terminal ANS at airports (outside the scope of the performance plan)	Yes
If yes, description of the nature of the services provided and the geographical scope	
Terminal ANS at military airports	
If yes, description of the arrangements for the financing of the services provided	
Ministry of Defence's Budget	

Services to OAT	Yes
If yes, description of the arrangements for the financing of the services provided	
Ministry of Defence's Budget	

Other ANS	Select
If yes, description of the nature of the services provided and the geographical scope	
Not applicable	
If yes, description of the arrangements for the financing of the services provided	
Not applicable	

Non ANS	Select
If yes, description of the nature of activities (products and/or services) performed and the relevant markets/customers	
Not applicable	

e) Changes in cost allocation methodology

Are there changes in the cost allocation criteria with respect to the previous reference period? If yes, please provide the description and justification of the changes and impact(s) on the determined costs and/or baseline.	No

f) Verification by the NSA

Confirmation by the NSA that the data and information included in this section have been verified in accordance with Art. 22(7) of IR 2019/317	Yes

3.4.5 - Cost allocation - NSA

Complementary information may be provided in ANNEX M

a) Supervision costs

Description of the supervision activities performed by the NSA(s), the underlying assumptions used to estimate the related determined costs and the main factors explaining the variations of these costs over the reference period
ENAC has specific and separate accountability regarding the activities performed by the different structures involved in NSA tasks that allows to attribute costs analitically in terms of number and type of FTEs and salary costs. Informatic and logistic costs are allocated to NSA based on FTE driver. At the time of the PP drafting activity no main variations are supposed to occur during the RP4.

Description of the methodology used to allocate NSAs supervision costs between en route and terminal as well as across different charging zones
The methodology is driver based. The driver follows the allocation of all the other costs between en route and terminal (76% - 24%)

b) Search and rescue costs (if reported as part of the NSA costs)

Description and underlying assumptions for search and rescue costs and main factors explaining the variations over the reference period
No search and rescue costs are allocated to NSA

Total search and rescue costs for the entity providing search and rescue services (in nominal terms in '000 national currency)	2025	2026	2027	2028	2029
Determined costs for en route charging zone(s) in the scope of the performance plan	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Determined costs for terminal charging zone(s) in the scope of the performance plan	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Forecasted search and rescue costs outside the scope of the performance plan	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*

Description of the methodology used to allocate search and rescue costs to civil aviation and in the scope of the performance plan, including the proportion of search and rescue costs included in the scope of the plan as compared to total search and rescue costs incurred by the entity
n.a.

Description of the methodology used to allocate search and rescue costs to civil aviation between en route and terminal as well as across different charging zones
n.a.

c) Changes in cost allocation methodology

Are there changes in the cost allocation criteria with respect to the previous reference period? If yes, please provide the description and justification of the changes and impact(s) on the determined costs and/or baseline.	No

d) Verification by the NSA

Confirmation by the NSA that the data and information included in this section comply with the requirements of Article 15(2) Regulation (EC) No 550/2004 and with IR 2019/317.	Yes

Assumptions underlying the determined pension costs and expected evolution over Reference Period 4 (for Main ANSP please refer to tab 3.4.7)	Please refer to section tab. 3.4.7	En-route charging zones							
		Terminal charging zones							

Description of the main factors explaining the planned variations of staff costs over the reference period
The forecast figures for the RP4 period foresees an average annual growth in nominal terms of 4,6%, equal to 2,8% in real terms, i.e. net of expected inflation in the period. **For 2025,** the increase in cost compared to 2024 is related to: - one-off payment of the 2023 - 2025 inflation recovery (15 million euros, taking into account that in the labor contract for the concerning period the planned inflation was equal to 2%); - overtime for ATCOs H35 (5 million euros); - new hires of ATCOs + admission of external staff under contract for hiring of junior ATCOs in 2026 (total of 128 units, for 4,5 million euros) to support the further traffic growth expected in 2025 and 2026 (in 2025, +5,9% UdS Vs 2024, after the +10,1% previously recorded in 2024 Vs 2023); - agreement with trade union to guarantee an adequate level of availability and presence of the operational staff during the summer season (5 mln euros); - other effects related to coinciding holidays, unused vacation days and travel allowances. **Year 2026:** - renewal of the 2026-2028 CCNL (10 million euros); - overtime for ATCOs (3,5 million euros); - carry-over effect of FTEs 2025 on 2026 + 2026 hiring (65 FTEs for 4,5 million euros); - other effects related to coinciding holidays, unused vacation days and travel allowances. **Year 2027:** - effect of contractual changes for professional profiles 2027, including changes in category /qualification of ops staff (2 million euros); - carry-over effect of FTEs 2026 on 2027 + 2027 hiring (88 FTEs for 5,5 million euros); - overtime for ATCOS (2 million euros); - other effects related to coinciding holidays, unused vacation days and travel allowances.

Year 2028:
- allowance for travel and missions of ATCOs teachers for training of new ATCOs on the ACCs of Rome and Milan (2,5 million euros);
- effect of contractual changes for professional profiles 2027, including changes in category /qualification of ops staff (2,5 million euros);
- carry-over effect of FTEs 2025 on 2026 + 2026 hiring (37 FTEs overall, for 3,5 million euros);
- overtime for ATCOs staff H35 (1,5 million euros);
- other effects related to coinciding holidays, unused vacation days and travel allowances.

Year 2029:
- renewal of the 2029-2031 CCNL (10 million euros);
- other effects related to coinciding holidays, unused vacation days and travel allowances.

b) Other operating costs

Number of entries	6

#	Other operating costs building blocks (in nominal terms in '000 national currency)	Description of the composition of each item	Charging zones	Actual	Forecast	Determined

Description of the main factors explaining the planned variations of other operating costs over the reference period

The expected figures for RP4 foresee an average annual growth of other operating costs in nominal terms of 4,4%, equal to 2,3% in real terms, i.e. net of the inflation expected in the period.
In 2025, approximately 3 million euros are expected for the maintenance of the operating Software and Hardware relating to the data and voice connection circuits (E-Net2), as well as for the maintenance of operating ATM equipment resulting from the ongoing transition phase of the APPs in the ACCs and the digitalization of control towers. Still in 2025, approximately 1,5 million euros are due to major maintenance for electrical system on the runway of the airport – AVL – also due to the expected greater use of equipment following high traffic volumes; 1 million euros for the extension of the maintenance perimeter of buildings, systems and remote sites (including

water systems, radar and weather stations, pylons and towers). For 2026 is also estimated the cyclical maintenance of the flight control systems and equipment for approximately 3,5 million euros.
In 2028, costs for approximately 1 million euros are expected for support from external companies relating to the renewal of certificates as DNV-ISO and for assistance on cybersecurity and operational data protection issues following the new software and hardware equipment expected to enter into operation.
Still in 2028 and especially in 2029 are expected higher costs for 3,5 million euros for maintenance of software and hardware of new investment entering into operation, i.e. 4Flight and Co-Flight.
IRIS costs have been included starting from 2027 and estimated amounts are:
2027: 0,9 mln euro
2028: 1,5 mln euro
2029: 1,5 mln euro
ENAV will not have any dividend income in RP4 related to the Iris service. This may change in the following reference periods.

Related to the breakdown of costs for communication services please see comment 3.4.3 Table b)

3.4.6.2 - Investment costs

a) Depreciation costs

Method adopted for the calculation of the depreciation cost (point 1.3 of Table 1):	Historical

b) Cost of capital

Description of the assumptions used to compute the cost of capital (point 1.4 of Table 1), including the composition of the asset base, the return on equity, the average interest on debts and the shares of financing of the asset base through debt and equity

Details are provided in Annex T1.

Cost of capital assumptions	Description of each item
NBV fixed assets	For the RAB NBV only the assets in use and in progress have been used, net of participations, and of the deferred income for capital-financed activities referrable to PON/CEF/SESAR.
Adjustments total assets	Not applicable
Net current assets	With reference to the RAB Net Current, following the request of the Italian NSA, the amount foreseen in ENAV Financial Report at 31.12.2023 for approximately 41,4 million euros has been used and kept constant for the entire RP4
Cost of capital %	It has been calculated using the PRB tool - the WACC estimated for RP4 is lower than the efficient WACC reported for Italy by the PRB. Details are provided in Annex T1.
Return on equity	It has been calculated using the PRB tool - the RoE estimated for RP4 is lower than the efficient RoE reported for Italy by the PRB. Details are provided in Annex T1.
Average interest on debts	The average interest rate used for the calculation of the WACC in the scope of the cost of capital calculation considers the evolution of interest rates in the years of the Reference Period 4. Interest rates are currently decreasing, and the ECB has already cut rates three times in 2024. This trend is expected to be confirmed in 2025 with additional three cuts. Taking into account that each cut is equal to 0.25 points, this means that the total decrease expected at the end of 2025 is equal to 1.50 points. Our analysts consider that this trend will be kept for the next two years and after that interest rates will record a slow increase. Then, confirming the trend described in the Reporting Tool, the cost of debt has been adjusted from the year 2025 to 2029, with a value of 1% per year. In total, the cost of debt is equal to 3.1% in 2025, up to 3.5% in 2029.
Share of financing through equity	As from PRB tool calculations considered that the value is near to the value calculated based on ENAV 2023 financial statement

3.4.6.3 - Costs for VFR exempted flights

Description of the methodology and assumptions used to establish the costs of air navigation services provided to VFR flights, when exemptions are granted for VFR flights in accordance with Article 31(3), 31(4) and 31(5)
VFR exempted flights do not have a material impact and therefore are not reported.

3.4.6.4 - NSA verification

Findings of the verification by the NSA (under Art. 22(7) of IR 2019/317) of the compliance of the determined costs of the ANSP with the requirements of Article 15(2) of Reg. 550/2004 and Article 22 of IR 2019/317, and where applicable identification of corrections applied to the cost base as a result of this verification
ENAC has overseen the methodology and assumptions used by ENAV to estimate RP4 costs. The NSA has examinated the justifications and documentation submitted by ENAV on estimated costs: ENAV presented certified accountability for 2023 initial data, as well as the macroeconomic parameters estimated and the service units forecasting for the period.

via terrestrial link		Terminal charging zones							
Costs for air-ground communications services via satellite link		En-route charging zones							
		Terminal charging zones							

Description of the main factors explaining the planned variations of other operating costs over the reference period
In accordance with Article 12(1) and (2) of the service provision Regulation, owing to the legal status of ITAF, full compliance with the international accounting standards is not possible. To achieve compliance to the maximum possible extent an ad hoc methodology has been developed to determine the cost of the service provided for Civil Aviation. It's not possible provide more granular information on the costs incurred for the provision of communication services, due to the metodology in use that provide evidence of en route costs and terminal costs (out of scope of Performance plan), in line with table 1 of regulation 317/2019.

3.4.6.2 - Investment costs

a) Depreciation costs

Method adopted for the calculation of the depreciation cost (point 1.3 of Table 1):	Historical
If current cost accounting is applied, equivalent historical cost accounting figures have to be provided in Annex E in order to allow for comparison	

b) Cost of capital

Description of the assumptions used to compute the cost of capital (point 1.4 of Table 1), including the composition of the asset base, the return on equity, the average interest on debts and the shares of financing of the asset base through debt and equity

Not Applicable

Cost of capital assumptions	Description of each item
NBV fixed assets	
Adjustments total assets	
Net current assets	
Cost of capital %	
Return on equity	
Average interest on debts	
Share of financing through equity	

3.4.6.3 - Costs for VFR exempted flights

Description of the methodology and assumptions used to establish the costs of air navigation services provided to VFR flights, when exemptions are granted for VFR flights in accordance with Article 31(3), 31(4) and 31(5)
VFR flights are excluded from the total traffic managed in the year meaning that costs are only charged to IFR civil traffic. VFR flights remain a burden on the Ministry of Defense budget

3.4.6.4 - NSA verification

Findings of the verification by the NSA (under Art. 22(7) of IR 2019/317) of the compliance of the determined costs of the ANSP with the requirements of Article 15(2) of Reg. 550/2004 and Article 22 of IR 2019/317, and where applicable identification of corrections applied to the cost base as a result of this verification
ENAC has overseen the methodology and assumptions used by ENAV to estimate RP4 costs. The NSA has examinated the justifications and documentation submitted by ENAV on estimated costs: ENAV presented certified accountability for 2023 initial data, as well as the macroeconomic parameters estimated and the service units forecasting for the period.

3.4.7 - Pension assumptions

ENAV

3.4.7.1 Total pension costs, including retirement and pre-retirement schemes (in nominal terms in '000 national currency)

Pension costs per segment	2025D	2026D	2027D	2028D	2029D
En-route activity	93.326	98.902	102.248	106.457	108.951
Terminal activity	33.342	35.178	37.043	38.229	39.372
Other activities					
Total pension costs	126.668	134.080	139.291	144.686	148.323

3.4.7.2 Assumptions for the "State" pension scheme (in nominal terms in '000 national currency)

Are there different contribution rates for different staff categories? If yes, how many?	No

<Staff category name>	2025D	2026D	2027D	2028D	2029D
Total pensionable payroll to which this scheme applies	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Employer % contribution rate to this scheme	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*
Total pension costs in respect of this scheme					
Number of employees the employer contributes for in this scheme	*not applicable*	*not applicable*	*not applicable*	*not applicable*	*not applicable*

Description on the relevant national pension regulations and pension accounting regulations on which the assumptions are based, as well as information whether changes of those regulations are to be expected during RP4
Costs reported are referred to social contributions. In Italy the contribution system foresees that when the employee is retired, the pension is paid by the social Institutions, on the basis of the rules enclosed in the national Law. Therefore, the ANSP does not bear pension costs. Please note that the estimated values for pension are reported for information only and are calculated in a proportional way, according to the latest actual values available. Any difference in pension costs between planned and actual values will not generate any under/over recovery, unless, as foreseen by art. 28(2)(c) it is "resulting from unforeseeable changes in national pensions law, pensions accounting law or unforeseeable changes in financial market conditions, on the condition that such changes in pension costs are outside the control of the air navigation service provider" and that such variation will impose an obligation to the ANSP to bear pension costs.

Description of the assumptions underlying the calculations of pension costs comprised in the determined costs, separately for retirement and early retirement
Please note that the estimated values for pension are reported for information only and are calculated in a proportional way, according to the latest actual values available.

Describe the actions taken ex-ante to manage the cost-risk (cost increase) associated with this item, as well as the actions taken to limit the impact of the unforeseen change on the costs to be passed on to airspace users
As reported above, please note that any difference in pension costs between planned and actual values will not generate any under/over recovery, unless, as foreseen by art. 28(2)(c) it is "resulting from unforeseeable changes in national pensions law, pensions accounting law or unforeseeable changes in financial market conditions, on the condition that such changes in pension costs are outside the control of the air navigation service provider" and that such variation will impose an obligation to the ANSP to bear pension costs.

3.4.7.3 Assumptions for the occupational "Defined contributions" pension scheme (in nominal terms in '000 national currency)

Are there different contribution rates for different staff categories? If yes, how many?	No

3.4.7.4 Assumptions for the occupational "Defined benefits" pension scheme (in nominal terms in '000 national currency)

Are there different defined benefits schemes applicable? If yes, how many?	No

3.4.8 - Interest rate assumptions for loans financing the provision of air navigation services

ENAV

Select number of loans	5

Interest rate assumptions for loans financing the provision of air navigation services
(Amounts in nominal terms in '000 national currency)

EIB 100 MLN		2025D	2026D	2027D	2028D	2029D
Description		Loan of EUR 100 million (nominal amount) signed in 2014, representing the first of three tranches belonging to a framework agreement signed in 2014 with the EIB for the financing of the '4 Flights Projects' and related investments, and with a repayment plan of semi-annual instalments in arrears from December 2018 to December 2029, with a fixed annual interest rate.

3.4.9 - Additional determined costs related to measures necessary to achieve the en route capacity targets

Additional costs of measures necessary to achieve the capacity targets for RP4?	No

3.4.10 - Restructuring costs

3.4.10.1 Restructuring costs from previous reference periods to be recovered in RP4

Restructuring costs from previous reference periods approved by the European Commission?	No

3.4.10.2 Restructuring costs planned for RP4

Restructuring costs foreseen for RP4?	No

Additional comments

SECTION 3.5: ADDITIONAL KPIS / TARGETS

3.5 Additional KPIs / Targets

Annexes of relevance to this section

ANNEX J. OPTIONAL KPIs AND TARGETS

3.5 - Additional KPIs / Targets

Number of additional KPIs	0

SECTION 3.6: DESCRIPTION OF KPAS INTERDEPENDENCIES AND TRADE-OFFS INCLUDING THE ASSUMPTIONS USED TO ASSESS THOSE TRADE-OFFS

3.6 - Description of KPAs interdependencies and trade-offs including the assumptions used to assess those trade-offs

3.6 - Description of KPAs interdependencies and trade-offs including the assumptions used to assess those trade-offs

3.6.1 - Interdependencies and trade-offs between safety and other KPAs

a) With regard to the over-riding safety objectives, what pressures does your organisation experience in meeting the cost, capacity and environmental KPAs? Describe how you ensure that these pressures do not negatively impact safety within your organisation. Describe the mitigation measures that have been introduced to demonstrate that safety performance has been sustained and what monitoring has been envisaged to measure the effectiveness of those mitigations.

ENAV will always implement changes to the functional sytem in order to mantain and improve the performance in all Areas, being always compliant to the safety criteria specified in the Reg. EU 2017/373.
The application of the safety procedures will ensure the maintenance of the current level of safety while aiming at delivering according to the Performance Plan targets in the KPAs.
Moreover, for all the major changes ENAV has adopted a specific monitoring process in order to analyze the behaviour of the monitoring criteria.
With reference to the second Italian provider, ITAF, it is highlighted that an agreement has been concluded between ITAF and ENAC for the application of national and international safety standards. ITAF provides air navigation services to general air traffic in accordance with Article 7(4) of Regulation (EU) No. 2024/2803. In providing air navigation services to general air traffic and operating EATMN systems, ITAF complies with relevant national and international standards and regulations.

b) What are the main assumptions used to assess the interdependencies between safety and other KPAs? Please provide a detailed analysis. Describe the analysis methodology and the data that has been used to assess the interdependencies between safety and other KPAs. What indicators, in addition to those described in the Regulation, are used for monitoring during the reference period to ensure that the targets in the KPAs of capacity, environment, and cost-efficiency are not degrading safety?

Safety is the main goal to reach and all other KPAs will be reached as a function of it in order to be fully compliant with Reg. EU 2017/373 ATS.OR.210.
As a general rule, any improvement in KPAs is based on the assumption that at least the current level of safety is maintained.
ENAV currently monitors the following additional metrics: rate of UPAs, rate of ASPs, RP4 KPIs also for airports outside of the scope of the performance regulation. We are evaluating to maintain these metrics together with the other RP4 KPIs. ENAV is also planning to eventually develop some additional ones to cover specific aspects that might arise.
ENAV monitors the safety performances both for each major change and for each ATS Unit (ENAV produces periodically a Unit Safety Case).
European rules are not applied to ITAF, anyway ITAF complies with relevant national and international standards and regulations as possible as praticable.

c) Describe the organisation’s philosophy for managing competing priorities between the KPAs effectively – for instance delaying programmes to manage competing demands. It is expected that the organisation uses its business risk management processes to assess the consequential risks of the organisation’s competing priorities to achieve its business goals.

For ENAV, the management is fully aware of the evolution of a project. Each project, especially those that can be considered as a major change, has a Change Owner, a PM, a technical-operational team (IPT) and a Risk Assessment Team (RAT) that is composed of safety experts, technical experts, ATCOs, etc.
The report of the RAT is signed by the Safety Manager and it's shared with all the responsibles/units involved by the change including the COO, the CTO and the PM. The Business Risk Management process is assured by the PM and Change Owner activities.
Managing competing priorities between the KPAs is out of scope of ITAF, which offers services primarily to aircraft movements other than general air traffic.

d) What trade-offs in safety have been accepted to manage resources shortfalls in realising the organisation’s objectives to meet the cost, capacity and environment KPA targets? Have trade-offs restricted the release of staff for safety activities, such as safety training (ATC training excepted), safety surveys, safety audits, safety assessments, safety studies and analyses?

ENAV relevant departments (e.g. Safety, HR, Operations) operate and plan the employement of the resources in order to avoid lack of safety personnel in every safety activity.

e) Has the State reviewed the ANSP financial and personnel resources that are needed to support safe ATC service provision through safety promotion, safety improvement, safety assurance and safety risk management in line with planned changes that will enable targets in other KPAs to be achieved? Please provide a detailed explanation.

Safety is a paramount both for ITAF and ENAV. The right shaping of financial and personnel resources is continuously assessed to ensure the proper support to safe ATC service provision.

3.6.2 - Interdependencies and trade-offs between capacity and environment

The implementation of the Free Route in the Italian airspace, optimized thanks to the lowering up to FL 195; the free route cross border operations with the Balkan quadrant and with north-eastern border; the FUA and the current gradual process of implementation of the Dynamic RAD, all are factors that have led to a greater availability of our national airspace in terms of spare ATC Capacity.
These airspace implementations, in line with the national programs and already coordinated with the Network Manager, certainly favor the optimization of the trajectory planning of the AUs, therefore allowing improvements in the environmental impact and, at the same time, increasing the availability of the ATC Capacity in the national airspace, at least to the extent that the optimal balance between airspace capacity and flight efficiency is achievable.

3.6.3 - Interdependencies and trade-offs between cost-efficiency and capacity

There is a clear interdependence between cost efficiency and capacity. An increase in capacity, and thus a decrease in delays, has a cost that translates into better technology, and consequent training in its use. In addition to this, traffic growth also requires an improvement in the management of configurations, which is achieved by dynamically managing airspace, according to a concept that Enav has already been applying for several years, thanks to which it is possible to react dynamically to variations in traffic demand by varying the lateral and vertical limits of the operational sectors that make up the configurations. Ultimately, if the growth trend continues to be maintained, it will also be necessary to resort to increase the number of available operational sectors, which is achieved by increasing the number of available ATCOs and thus more costs.

3.6.4 - Other interdependencies and trade-offs

SECTION 4: CROSS-BORDER INITIATIVES AND SESAR IMPLEMENTATION

4.1 - Cross-border initiatives and synergies

4.1.1 - Cross-border areas where the ANSP provides ANS outside the State's charging zone(s) in the scope of the performance pla
4.1.2 - Planned or implemented cross-border initiatives at the level of ANSPs
4.1.3 - Investment synergies achieved at FAB level or through other cross-border initiatives

4.2 - Deployment of SESAR Common Projects (CP1)

4.3 - Change management

Annexes of relevance to this section

ANNEX N. CROSS-BORDER INITIATIVES
ANNEX V. CONSISTENCY OF INVESTMENTS WITH ATM MASTER PLAN

4.1 - Cross-border initiatives and synergies at the level of the ANSP(s)

4.1.1 - Cross-border areas where the ANSP(s) provide(s) services outside of the State's charging zone(s) in the scope of the performance plan

As indicated in section 1.1.1, the cross-border area(s) reported below are those cross-border areas or groups of adjacent cross-border areas of a size above 500 km2, unless the area or group of areas concerned has fewer than 7,500 controlled flight movements on average per year.

Number of cross-border area(s) where the ANSP(s) of the Member State provide(s) services in another State's charging zone(s)	**10**

Cross-border area(s) #1		**Situated in:**				
Geographical scope of the cross-border area(s)						
Rationale for establishing the cross-border area, including performance benefits						
Size of the cross-border area (km2)						
Estimated annual number of flights						
Estimated annual number of SUs, if available						
Description of the services provided by the ANSP in the cross-border area						
Cross border arrangements are in place between ACCs, according to Reg. UE 2017/373 and all cross-border arrangements irrespective of the size of the airspace or the number of flights operating in those airspaces. The provisions have technical and operational effects and have no sovereignty or financial impacts (according to Reg. UE 2019/317). The technical cross-border agreement in place with:Beograd ATCC and Brindisi ACC; Zagreb ACC and Brindisi ACC; Milan ACC and Geneva ACC; Milan ACC and Marseille ACC; Milan ACC and Zurich ACC; Padova ACC and Wien ACC; Padova ACC and Zagreb ATCC; Padova ACC and Ljubljana ATCC; Roma ACC and Malta ACC; Roma ACC and Tunis ACC. For further details, refer to Annex N						
Annual cost incurred by the ANSP for the provision of services in the cross-border area	2025	2026	2027	2028	2029	
Methodology used to estimate/establish these costs						
Have these costs been excluded from the determined costs in the scope of the performance plan?					Select	
Description of the financial arrangements in place to cover these costs						
Additional comment						

4.1.2 - Planned or implemented cross-border initiatives at the level of ANSPs

Number of cross-border initiatives	1

Initiative #1	
Name	Cross Border Free Route Italy Malta
Description	Cross Border activation for free route operations between Italy and Malta
Expected performance benefits	Enhancement on Flight Efficiency
Additional comments	The implementation of the cross-border free route with the SECSI FRA states also included the airspace of Malta. Initially suspended, it will be connected in November 2025 using the same criteria. This will allow further enviroment benefits by increasing the airspace available for free route operations.

4.1.3 - Investment synergies achieved at FAB level or through other cross-border initiatives

Details of synergies in terms of common infrastructure and common procurement
There are no activities/investment synergies to be reported in this section.

4.2 - Deployment of SESAR Common Projects (CP1)

CP1 ATM Functionality (CP1-AF)/ Sub-functionality (CP1-s-AF)	Target date of implementation	Date of actual/expected deployment of s-AF	Description of realised and/or planned investment(s) related to the deployment of s-AF	Relevant investments (Ref. # as per section 2)	RP4 determined costs related to the sub-AF (in national currency and in nominal terms)

4.3 - Change management

Change management practices and transition plans for the entry into service of major airspace changes or for ATM system improvements, aimed at minimising any negative impact on the network performance
ENAV change management practices are planned for the activities delivering changes in the operational configurations and new tools/systems implemented within the main ATM System. In particular for all planned changes implying a different configuration of the airspace, new tools impacting the ATCO working methods or a different articulation of the working positions, a dedicated set tests and trials will be planned, as well as required training hours, in order to train the personnel on the modified working environment and guarantee the required resilience of the system as a consequence of all implemented changes. The same applies for large projects where new technological changes and/or ATM System Improvements (Remote and Digital towers, New Tower ATM platform and new ACC ATM System) will be implemented, that will bring changes to the way services are delivered. Test and trial sessions will be performed in order to guarantee confidence of the Operational Personnel on the implemented changes and the improvements implemented will be observed for an adequate amount of time in order to ensure safety and resilience of the systems following the implemented changes, bearing in mind the requirement to minimise all impact on the service levels provided and the business continuity. ITAF follows the processes and instructions of the Ministry of Defence and has entered into a special agreement with ENAC to implement safety principles in the supply of ANSs to civil aviation. For any change there are quality and safety procedures to be compliant with. All procedures are part of the ENAV Quality Management System adhering to UNI EN ISO 9001:2015 and all Safety Management measures and processes are depicted within the ENAV Safety Management System. In the following we try to summarise the steps tackled when requirement for change occurs: 1. for any change, according to the existing quality procedure it has to be prepared a change proposal in which must be included a preliminary safety evaluation of the change. This evaluation aims to define if it is a major or a minor change. In case of major change the process continues as follow: 2. the safety department convenes the RAT (risk assessment team) that has to work on identifying the assumption and the Safety Requirement to be applied to make the change operative. 3. The RAT has to produce as output a document (RCC Report of the Complex Change)to detail: - descrition of the change, - the descrition of the technological hardware/software impacted by the change togheter with the description of all the constituents of the system itself: - the operational procedure in force before the change and the new procedures to be applied if any; - the assumption taht shall exist to keep the study valid and applicable; - the safety requirements to be applied in terms of both technical change and operational procedures to be applied to proceed to the implementation; - the Conversion Training Plan to be applied to the ATCOS affected by the change. 4. The NSA has to proceed in a double approval, one for the Conversion Training Plan and one for the change itself, by analyzing the RCC document; 5. Togheter with the approval by NSA, we provide three steps of verification two mandatory and one if survillance is impacted: - technical acceptance of the product release by verification of compliance with the manufacturer's issued technical requirements; - operational survillance validation, if applicable, in which there is a verification of the survillance performance; - operational validation of the modified system in all the functionality, the impact in the operation, the new procedures in order to certify the usability of the new system. 6. after the transition into operation it starts an observation period, of at least 30 days, in which the system is monitored in operations in order to check if some customization is needed or if there is some collateral effect that didn't occur during the tests. In case of minor change the process is less complex and the safety department has to monitor the proper classification of the change and the safety requirement defined if any.

SECTION 5: TRAFFIC RISK SHARING ARRANGEMENTS AND INCENTIVE SCHEMES

Annexes of relevance to this section

ANNEX G. PARAMETERS FOR THE TRAFFIC RISK SHARING
ANNEX I. PARAMETERS FOR THE MANDATORY CAPACITY INCENTIVES
ANNEX K. OPTIONAL INCENTIVE SCHEMES

5.1 - Traffic risk sharing

5.1.1 Traffic risk sharing - En route charging zones

Italy			Traffic risk-sharing parameters adapted?			no
			Service units lower than plan		Service units higher than plan	
	Dead band	Risk sharing band	% loss to be recovered	Max. charged if SUs 10% < plan	% additional revenue returned	Min. returned if SUs 10% > plan
Standard parameters	±2,00%	±10,0%	70,0%	5,6%	70,0%	5,6%

5.1.2 Traffic risk sharing - Terminal charging zones

Italy - Zone 1 NEW			Traffic risk-sharing parameters adapted?			no
			Service units lower than plan		Service units higher than plan	
	Dead band	Risk sharing band	% loss to be recovered	Max. charged if SUs 10% < plan	% additional revenue returned	Min. returned if SUs 10% > plan
Standard parameters	±2,00%	±10,0%	70,0%	5,6%	70,0%	5,6%

Italy - Zone 2 NEW			Traffic risk-sharing parameters adapted?			no
			Service units lower than plan		Service units higher than plan	
	Dead band	Risk sharing band	% loss to be recovered	Max. charged if SUs 10% < plan	% additional revenue returned	Min. returned if SUs 10% > plan
Standard parameters	±2,00%	±10,0%	70,0%	5,6%	70,0%	5,6%

5.2 - Capacity incentive schemes

5.2.1 - Capacity incentive scheme - En route

a) Parameters for the calculation of financial advantages or disadvantages - En route

En route	Expressed in	Value
Dead band Δ	%	±15,0%
Max bonus (≤2%)	*% of DC*	2,00%
Max penalty (≥ Max bonus)	*% of DC*	2,00%

b) Pivot values - En route

Basis for the annual setting of pivot values	Modulated

c) Modulation mechanism (if applicable)

Section to be filled out only if the option for modulated pivot values has been selected under b) above.

Modulation mechanism of pivot values	B) Limited to CRSTMP delay causes

Based on the modulation mechanism(s) selected above, provide a detailed description of the principles and methodology used to modulate the pivot values

Option A) - Modulation based on unforeseen changes in traffic

1) the pivot value for the year N is **equal** to the yearly update of reference values provided by the Network Manager in the NOP	No
2) the pivot value for year N is **informed** by the yearly update early update of reference values by the Network Manager in the NOP	No

If 2) applies describe the principle and formulas on the basis of which the pivot values are calculated

Option B) - Modulation limiting pivot values to C, R, S, T, M, P delay codes

The scope of the incentives is limited to delay causes related to ATC capacity, ATC routing, ATC staffing, ATC equipment, airspace management and special events with the codes C, R, S, T, M and P of the ATFCM user manual
Explanation on the methodology used to modulate the pivot values accordingly
In line with EU Regulation and Supporting material provided by EC - The pivot value consists in the limitation of the scope of the incentive scheme to delay causes related to ATC capacity, ATC routing, ATC staffing, ATC equipment, airspace management and special events with the codes C, R, S, T, M and P of the ATFCM user manual. On the basis of statistical data and the share delays under the responsibility of the ANSP, the pivot value has been identified as a percentage of the national target. In particular the pivot value is set at around 50% of the national target (all reasons). All details are included in **Annex I** to the Performance Plan.

Additional information in the case of the combination of A) and B)

If the modulation of pivot values is based on both options A) and B) above, provide additional information on how these two modulation mechanisms are applied in combination with each other

5.2.2 - Capacity incentive scheme - Terminal

a) Parameters for the calculation of financial advantages or disadvantages - Terminal

Terminal	Expressed in	Value
Dead band Δ	fraction of min	0,01
Max bonus (≤2%)	*% of DC*	1,00%
Max penalty (≥ Max bonus)	*% of DC*	1,00%

b) Pivot values - Terminal

Basis for the annual setting of pivot values	Modulated

c) Modulation mechanism (if applicable)

Section to be filled out only if the option for modulated pivot values has been selected under b) above.

Modulation mechanism of pivot values	B) Limited to CRSTMP delay causes

Based on the modulation mechanism(s) selected above, provide a detailed description of the principles and methodology used to modulate the pivot values

Option A) - Modulation based on unforeseen changes in traffic

The pivot value for year N is modulated in order to enable significant and unforeseen changes in traffic to be taken into account	No

Description the principle and formulas on the basis of which the pivot values are calculated

Option B) - Modulation limiting pivot values to C, R, S, T, M, P delay codes

The scope of the incentives is limited to delay causes related to ATC capacity, ATC routing, ATC staffing, ATC equipment, airspace management and special events with the codes C, R, S, T, M and P of the ATFCM user manual
Explanation on the methodology used to modulate the pivot values accordingly
In line with EU Regulation and Supporting material provided by EC - The pivot value consists in the limitation of the scope of the incentive scheme to delay causes related to ATC capacity, ATC routing, ATC staffing, ATC equipment, airspace management and special events with the codes C, R, S, T, M and P of the ATFCM user manual. On the basis of statistical data and the share delays under the responsibility of the ANSP, the pivot value has been identified as a percentage of the national target. In particular the pivot value is set at a level of 0,06 m/f for all years of the reference period. All details are included in Annex I to the Performance Plan. Charging Zone apportionment: The bonus/penalty will be apportioned in the two charging zones according to the costs of the 2 charging zones. - In case the airports within the 2 charging zones both contribute to the over-performance then the bonus is apportioned between the 2 charging zones according to the respective costs. In case the airports within the 2 charging zones both contribute to the under-performance then the penalty is apportioned between the 2 charging zoned according to the respective costs In case the airports within the 2 charging zones will provide different contributions to the achievement (one over-perfoming and the other under-performing) the overall bonus or penalty at the national level will be apportioned considering that the charging zone under-performing will pay a penalty and the charging zone over-performing will receive a bonus. All details are included in Annex I to the Performance Plan.

Additional information in the case of the combination of A) and B)

If the modulation of pivot values is based on both options A) and B) above, provide additional information on how these two modulation mechanisms are applied in combination with each other

5.3 - Optional incentives

Total maximum bonus for all optional incentives (≤2%):	0,0%	Total maximum penalty for optional incentives (≤4%):	0,0%

Number of optional incentives	0

SECTION 6: IMPLEMENTATION OF THE PERFORMANCE PLAN

6 - IMPLEMENTATION OF THE PERFORMANCE PLAN

6.1 Monitoring of the implementation plan

Description of the processes put in place by the NSA to monitor the implementation of the Performance Plan including the yearly monitoring of all KPIs and PIs defined in Annex I of the Regulation and a description of the data sources
The monitoring process follows the indications of the provisions of Annex I to Reg. EU 2019/317. At the moment, the monitoring processes are reported in different internal publications of ENAC (e.g. MPSH for safety, which provide for at least two meetings a year). New Guidlines for analitic accountability standards have been released and sent to ANSP #1 ENAV last April 2024 and other procedural indications have been sent to ENAV on Regulatory Asset Base, Public Contribution allocation and investments. Coordination between the two divisions, technical and economical, is ensured by internal organisational procedures of ENAC.

6.2 Non-compliance with targets during the reference period

Description of the processes put in place and measures to be applied by the NSA to address the situation where targets are not reached during the reference period
Art. 7 of Law 14th november 2024 n. 166 «Urgent provisions for the implementation of obligations arising from European Union acts and Pending infringement and pre-infringement against the Italian state.», regulates penalties in case targets are not reached during the reference period.

7 - ANNEXES

Annex V to RP4 performance plan

Deployment of Strategic Deployment Objectives (SDOs) set out in the ATM Maste

Strategic Deployment Objectives (SDOs)	Specific deployment action linked with the implementation of the SDO as defined in the ATM MP
SDO #1 Alerts for reduction of collision risks on taxiways and runways	*DA1.1*
SDO #2 Optimising airport and TMA environmental footprint	
SDO #3 Dynamic airspace configuration	*DA3.1*

SDO #4 Increased automation support	*DA4.1*
SDO #5 Transformation to trajectory-based operations (TBO)	*DA5.3*
	DA5.1
SDO #6 Virtualisation of operations	*DA6.1 - DA6.2*
	DA6.1 - DA6.2
	DA6.1

	DA6.1
	DA6.2
	DA6.1

SDO #7 Transition towards high performance of air-ground connectivity (multilink)	*DA7.1*

SDO #8 Service-oriented delivery model (data driven and cloud based)	*DA8.1*
	DA8.1
	DA8.1
	DA8.1

SDO #9 CNS optimisation, modernisation and resilience	*DA9.3*
	DA9.3
	DA9.3
	DA9.4
	DA9.2
	DA9.3
	DA9.4
	DA9.1

SDO #10 Enable innovative air mobility (IAM) & drone operations *** Investments related to U-space in this SDO are outside the scope of the performance plan ***	

Total RP4 determined capital related and operating costs for project related to the deploymer in national currency)	

er Plan

Description of planned investment(s) related to the SDO including the relevant supporting SESAR solutions (if applicable)	Relevant investments (Ref. # as per section 2 of the performance plan)	RP4 determined c
		2025
New ATM TWR platform will allow implementation of improved ground safety nets in major and medium Italian airports	*A6*	- €
	Total costs SDO - 1	- €

	Total costs SDO - 2	

Procurement of predictive analysis tools to identify critical issues related to route planning or airspace organisation	*B2*	

	Total costs SDO - 3	**- €**

Development of ATCO support tool to increase predictability and prepare implementation of multi sector planning	*B2*	**70.000,00 €**
	Total costs SDO - 4	**70.000,00 €**

The ENAV new ATM ACC system will deploy enhanced subsystems with additional trajectory prediction capabilities and dynamic management of restrictions	*A5*	
The ENAV new ATM ACC system will deploy enhanced conflict detection and resolution (CD&R) support tools	*A5*	**100.000,00 €**
	Total costs SDO - 5	**100.000,00 €**

Required adaptazion of Brindisi ACC and renovation of the Padua ACC building to accommodate RTWR modules.	*A2*	**1.500.000,00 €**
Adaptation of local airport infrastructures in order to accommodate communication and all other infrastructures required to remotize local airports within a RTCC	*A4*	**700.000,00 €**
The new ENAV ATM ACC System will be deployed over virtualised environment in order to enable a virtual center configuration between the two ACCs (Rome and Milan) that will have responsibility over the italian airspace	*A5*	

Virtualisation of IT Infrastructure as an enabler to the cecoupling of services and applications	*A8*	**500.000,00 €**
COM infrastructure for Remote Towers will be deployed	*A9*	**800.000,00 €**
Deployment of VoIP enabled VCS in a virtualised VCS configuration among Air Traffic Service Units	*A10*	**1.100.000,00 €**
	Total costs SDO - 6	**4.600.000,00 €**

Evolve existing Data Link network to support future Moltilink requirements	*B14*	**- €**
	Total costs SDO - 7	**- €**

The new ENAV ATM ACC System will deploy a service oriented system architecture decoupling the system platform from the ATC applications	*A5*	**- €**
Implementation of cloud based and virtualised infrastructure in order to enable and support decoupling between platforms and applications	*A8*	**- €**
Immplementation of secure networking infrastructure as a prerequisite to the service oriented delivery model	*B12*	**- €**
Implementation of security supervision and control as a prerequisite to the service oriented delivery model	*B19*	**- €**
	Total costs SDO - 8	**- €**

Airport COM investment will contribute to the deployment of COM technology enabling optimisation of COM resources in line with available MON Concept and Design Criteria	*A9*	**1.000.000,00 €**
ACC COM investment will contribute to the deployment of COM technology enabling optimisation of COM resources in line with available MON Concept and Design Criteria	*A10*	**1.000.000,00 €**
Navigation Aids modernisation will allow to rationalise and optimise NAV equipments deployed throughout the italian territory in line with the MON Design Criteria available	*A11*	**1.500.000,00 €**
The investment will initiate a path towards optimisation of deployed ILS and will improve the possibility of remote maintenance for Navigation Aids	*A11*	**900.000,00 €**
This investment will implement data fusion of additional Surveillance sensors for enroute and TMA, integrated in the existing surveillance chain in a secure manner.	*A12*	**- €**
This investment will provide further optimisation of SUR infrastructure and services in line with the MON Concept and Design Criteria and will contribute to the optimisation of the overall surveillance picture in Italy	*A12*	**100.000,00 €**
This investment will provide further optimisation of SUR infrastructure and services and will contribute to the optimisation of the overall surveillance picture in Italy	*A12*	**100.000,00 €**
Future Satellite based Navigation and GBAS	*B15*	**- €**
	Total costs SDO - 9	**4.600.000,00 €**

	Total costs SDO - 10	**- €**
